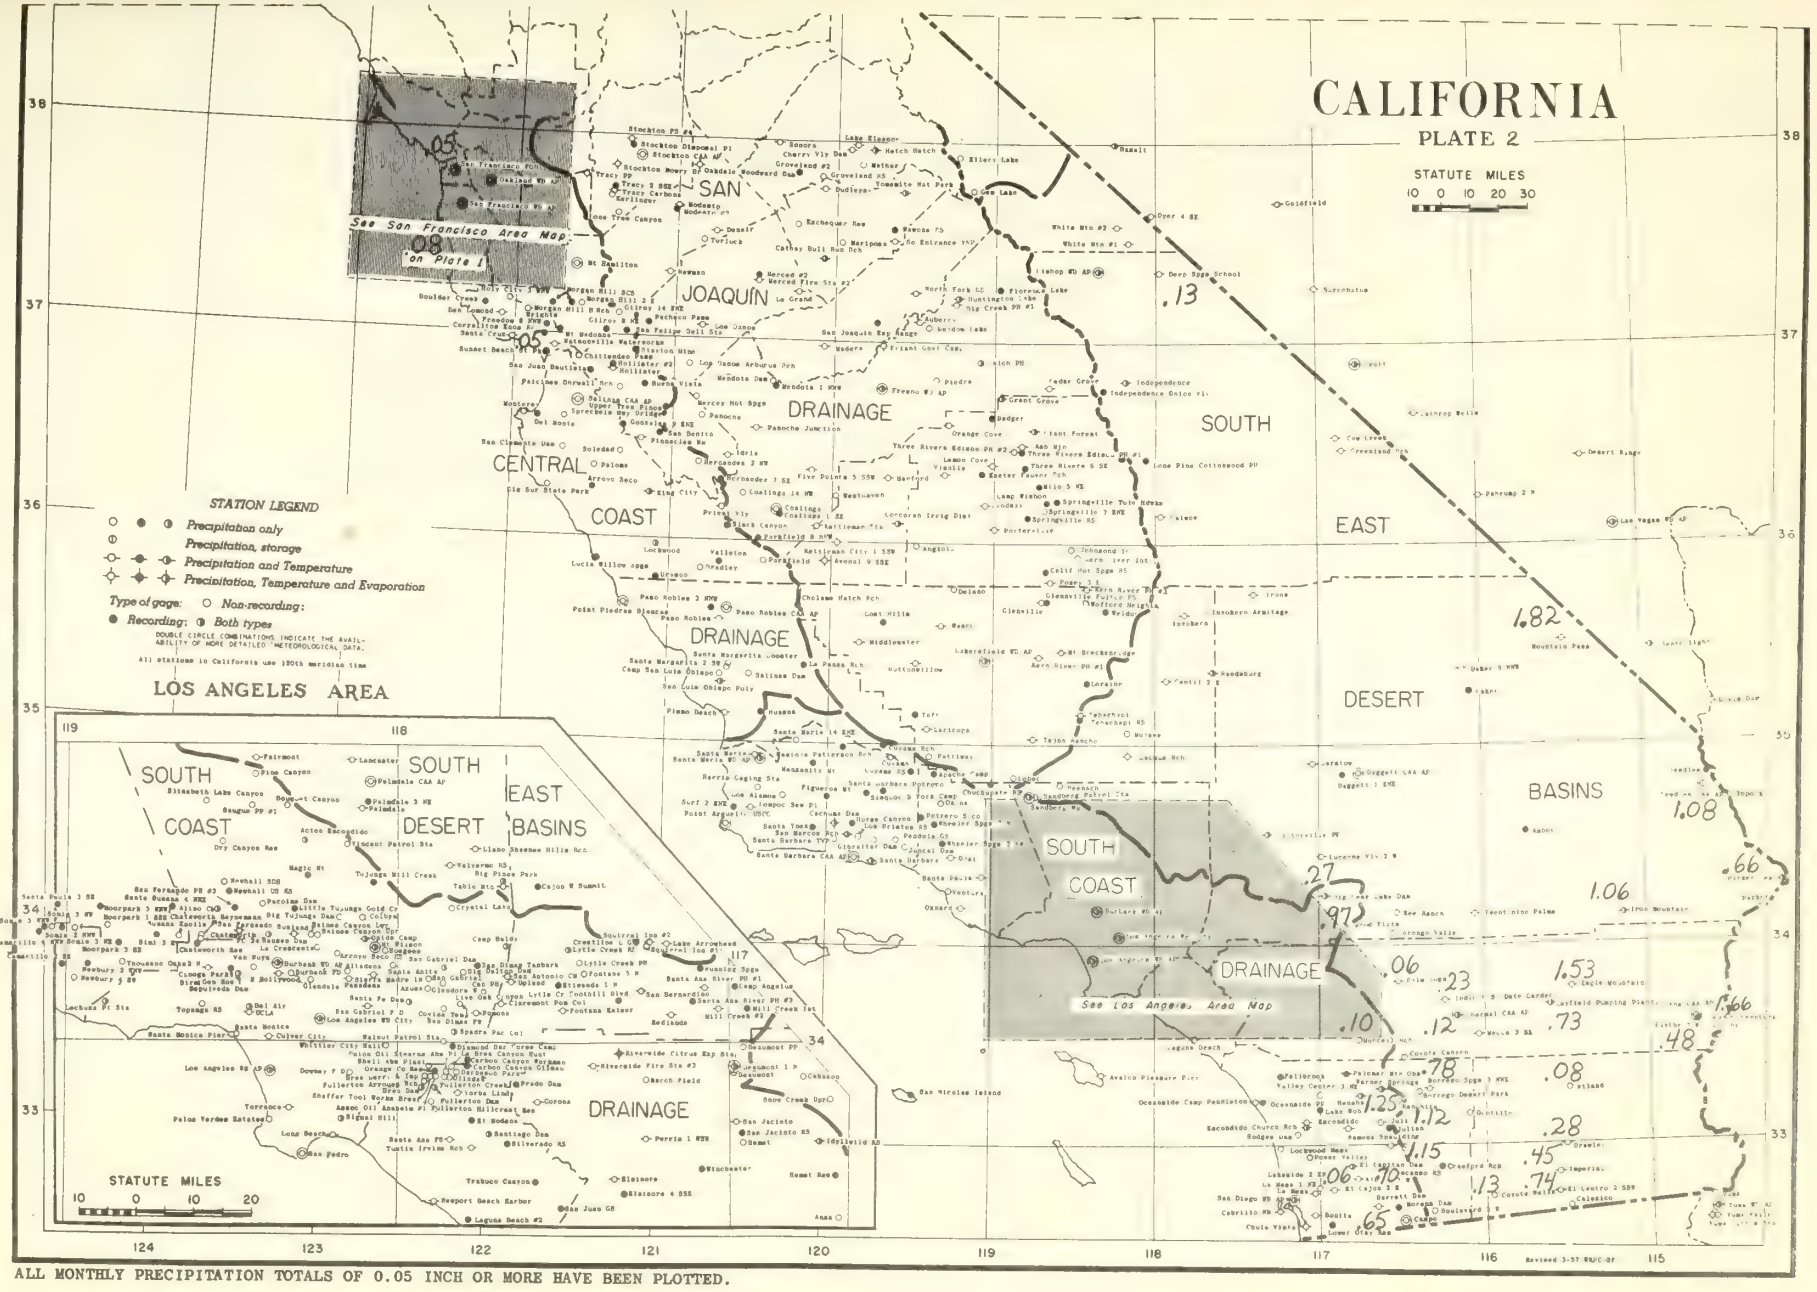
(a) SANDY LOAM -- UNDER BARE GROUND SURFACE. (b) RAMONA SANDY LOAM -- BARE GROUND, EXPOSED TO THE SUN. (c) RAMONA SANDY LOAM -- UNDER THE EAST SKIRT OF A VALENCIA ORANGE TREE, SHADED AND UNDER REGULARLY IRRIGATED SOIL. IRRIGATION WATER ON 18-INCH DEPTH AT 8:00 A.M. AUGUST 5 TO 8:00 A.M. AUGUST 7, ALSO FROM 8:00 A.M. AUGUST 26 TO 8:00 A.M. AUGUST 28. (d) SANDY LOAM -- UNDER GRASS.
MAXIMUM AND MINIMUM FROM CONTINUOUS RECORD.

See reference notes following Station Index.

TOTAL PRECIPITATION

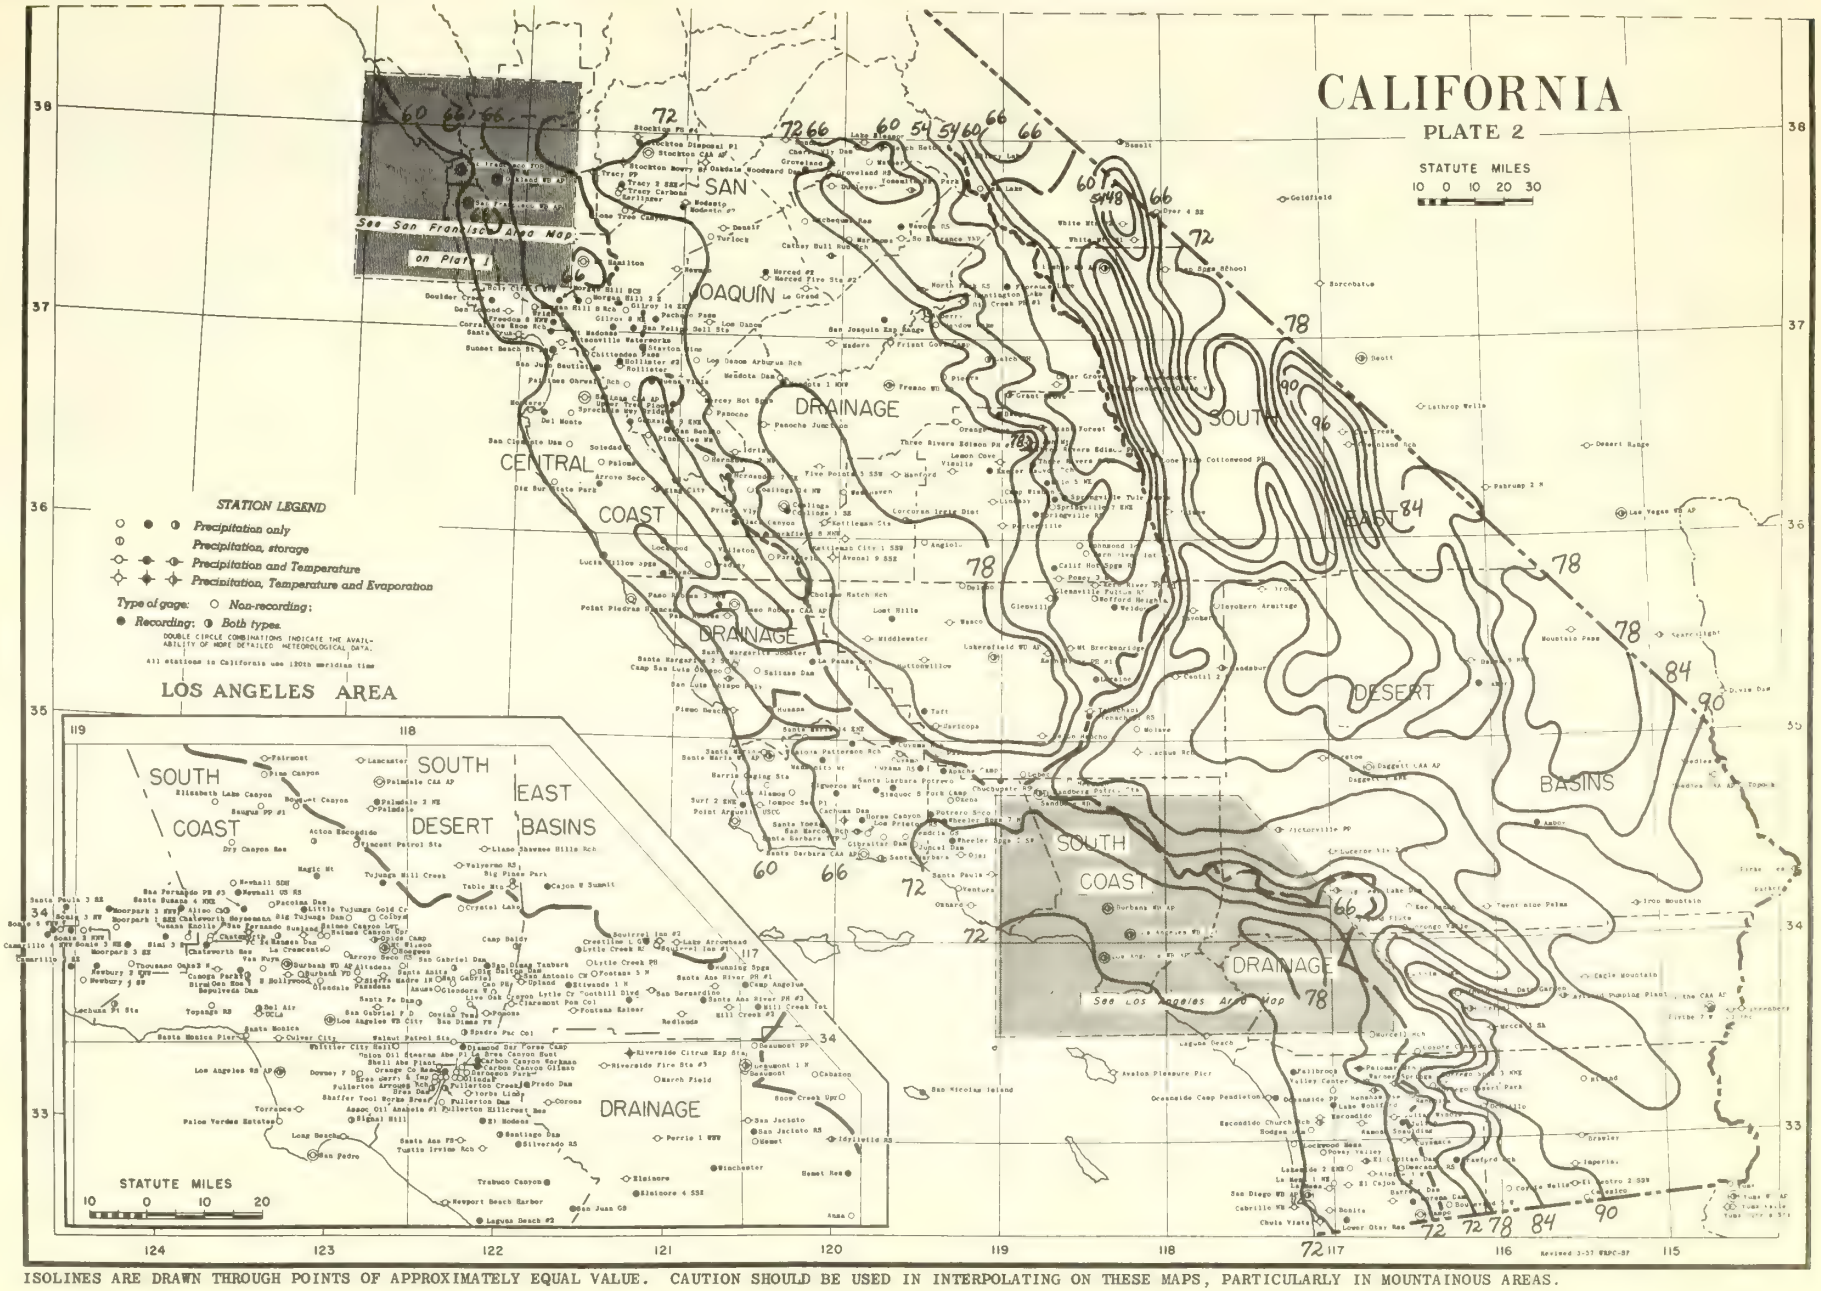
AUGUST 1957



ALL MONTHLY PRECIPITATION TOTALS OF 0.05 INCH OR MORE HAVE BEEN PLOTTED.

AVERAGE TEMPERATURE

Revised 3-57 WBPC-57



ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUE. CAUTION SHOULD BE USED IN INTERPOLATING ON THESE MAPS, PARTICULARLY IN MOUNTAINOUS AREAS.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snow pack result in apparent inconsistencies in the record.

Entries of snowfall in Tables 2 and 7, and in the Seasonal Snowfall table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in Tables 3, 5, 6, and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index lists observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:30 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST.

- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly precipitation totals.

+ And also on a later date or dates.

* Amount included in following measurement, time distribution unknown.

Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AM Data based on an observational day ending before noon.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

G In the "Refer to Tables" column in the Station Index the letter "G" indicates Daily Soil Temperatures are published.

M One or more days of record missing; if average value is entered, less than 10 days' record is missing. See Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".)

S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

SEPTEMBER 1957

Volume LXI No. 9

ASHEVILLE: 1957

WEATHER SUMMARY

Two storms of note passed over the State during September, a weak one from the 15th to 18th that caused locally light showers especially in the central portion and the adjacent mountains, and an intense upper level storm from the 26th to 30th that produced heavy rains in most of the northwestern portion causing considerable damage locally to crops. As a result this was the wettest September at Mt. Shasta since 1888, the wettest at Red Bluff since 1923, the third wettest at Sacramento in 109 years of record, and the third wettest at San Francisco since records began in 1849. However, the heavy rains were restricted to the northern one-third of the State. Except in the higher mountains, little or no rain fell during the month south of a line beginning from Ben Lomond on the coast, north-northeastward through the Sacramento Valley, and then east-northeastward to the Nevada border. A description of some of the storms and resulting damage will be found following this summary. Temperatures were a little on the warm side, more as a result of fairly persistent high minimums rather than from any prolonged periods of high maximums. This was the second warmest September at Eureka since records began in 1887. The fire danger was ended by the rains in northern California, but in the southern portion it remained high all month. The larger fires occurred in the Los Padres National Forest (9,600 acres) and in the San Gabriel Mountains.

With few exceptions, mean monthly temperature departures remained close to September averages, generally in the +2.0° to -2.0° range. Daily mean temperatures were most often above individual averages during the first ten days and again during the last ten days except in those areas receiving the heavier rains. Greatest positive departures were noted during the period 6th to 8th, when most stations recorded their highest maximum temperatures. The highest in the northern half of the State was 111° at Centerville Power House on the 7th, and in the southern half, 118°, at Cow Creek on the 8th. Cooler weather was dominant generally from the 15th to 19th statewide, and from the 26th to 30th in northern portions. Both White Mountain 1 and Bridgeport recorded the lowest minimums, 18°, on the 20th. Mean monthly temperatures ranged from a high of 93.3° at Cow Creek to a low of 39.6° at White Mountain 2.

Many stations in the northwestern one-third of the State received monthly precipitation totals in excess of 400 percent of average, some exceeding 900 percent. However, deficient rainfall was the rule over the remainder of California where monthly totals of less than 20 percent of average were not uncommon. Vollmers was the wettest station measuring 12.25 inches (885 percent of average), with 8.58 inches of it falling on the 27th, and the remaining 3.67 inches on the next three days. Daily catches of from 3 to 4 inches were noted in northwestern coastal valleys and in a large area in the vicinity of Mt. Shasta. The Weather Bureau station at Mt. Shasta measured 6.38 inches of rain on the 26th - 27th. This storm caused thousands of dollars of damage to a new highway under construction south of the city. Because the storms almost completely bypassed the southern half of the State, 223 stations there received no measurable monthly falls. Light snow was reported by the California State Highway Department on the 17th at Donner Pass and Carson Pass, and six inches of snow fell at Kaiser Pass (elevation 9,300 feet) between Huntington and Florence Lakes.

According to reports of the California Weekly Weather and Crop Bulletin, the warm weather over the State in general during the first two-thirds of September hastened the maturity of nearly all crops and accelerated harvesting activities. Light winds during this period also favored crop dusting especially in the Sacramento and San Joaquin Valleys. Citrus trees in the Los Angeles area were mostly recovered from earlier defoliation attributed to red scale and dry winds; however, below normal walnut crops were anticipated as a result of the persistent summer heat. Rains over the northern half of the State caused minor damage to prunes, grapes, tomatoes, and hay, and delayed harvesting and fieldwork in the north and central coastal valleys. Strong winds and rain on the 26th in the Sacramento Valley caused some trees to blow over in the young orchards and severely damaged some of the grapes and tomatoes. Fortunately precipitation was lightest over the heaviest tomato and grape growing areas. Crops in general over the State fared quite well with only the usual local setbacks being reported.

Joseph R. Glantz

Weather Records Processing Center
San Francisco, California

STORMS, SEPTEMBER 1957

On the 6th: Widespread thunderstorms in southern California counties associated with extremely warm weather caused many brush fires and locally strong winds. A lightning-caused brush fire at Palmdale destroyed 1 home, 2 garages, and a car, and damaged 2 other structures. A flash flood inundated roads in the Mojave Desert between Palmdale and Lancaster. Winds up to 60 m.p.h. swept parts of San Bernardino County, and lightning caused brush fires in Mill Creek, Oak Glen, Lucerne Valley, and Mission Canyon areas. A brief windstorm in Barstow tore down powerlines. In San Diego County gusty winds knocked down powerlines, disrupting service at Chula Vista, Coronado, and Imperial Beach. Winds of 43 m.p.h. were reported at the San Diego Yacht Club.

On the 26th to 28th: A Pacific northwest storm with a cold front moving across the northern part of the State beginning on the evening of the 26th caused widespread and locally heavy rains. These unseasonable rains caused considerable crop damage. At McCloud, Siskiyou County, heavy rains exceeding seven inches caused flooding of the Thimbleberry Creek, washing out fences and sidewalks, and flooding three homes. At Mt. Shasta flash flooding dumped tons of mud and debris on city streets. At Woodland, Yolo County, leaf-plugged gutter drains flooded streets in business and residential areas. Some streets in Davis were flooded to depths up to one foot due to an unfinished storm drain project. Strong winds damaged fences and gardens at Pt. Arena.

On the 29th: A lightning bolt struck and destroyed a huge substation transformer at Coyote Point on the San Francisco Peninsula. Powerlines, transformers, and insulators were struck by lightning at many places in Davis, Woodland, Colusa, and Knights Ferry areas of Sacramento Valley. A home was struck by lightning four miles northeast of Willows in Glenn County. Brief falls of hail 1/2 to 3/4 inch in diameter fell at Fiddletown and Garden Valley in the Sierra foothills, and hailstones knocked some grapes from vines in the Ukiah area of Mendocino County.

On the 30th: A series of violent thunderstorms moved rapidly northward across Lassen County, accompanied by torrential downpours and frequent hail. In a brief hailstorm on the north limits of Susanville, hailstones (come shaped) were as large as golf balls.

****

A survey has indicated that the comprehensive narrative weather story carried in each issue of Climatological Data is of value to only a small number of recipients. This story will be discontinued, therefore, with the January 1958 issue. A table of extremes will be carried each month and a text will be carried whenever unusual and outstanding weather events have occurred. General weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.

SEPTEMBER 18.
(d) SANDY LOAM -- UNDER GRASS.
MAXIMUM AND MINIMUM FROM CONTINUOUS RECORD.

PREPARATION AND PUBLICATION OF THIS BULLETIN

Much of the data presented in this publication comes from observations taken by volunteer cooperative observers. These observations are mailed after the close of the month to a Weather Records Processing Center, where they are checked for accuracy and completeness and placed on punch cards. These cards are used to prepare copy for the various tables. Printing and mailing is done at the National Weather Records Center at Asheville, North Carolina.

The various steps all take time. Records for any state cannot be checked by machine until nearly all of them for that state have been received. Printing cannot be done until all the tables and the text for an issue are completed and assembled.

Constant effort is made to speed up publication and still maintain high quality of the data. A realistic deadline for mailing the printed Climatological Data has been set as the 15th of the second following month (45 days after the end of the month for which data are published). If any recipient's copy is unduly delayed, the Director, National Weather Records Center, Asheville, North Carolina should be advised.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snow pack result in apparent inconsistencies in the record.

Entries of snowfall in Tables 2 and 7, and in the Seasonal Snowfall table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in Tables 3, 5, 6, and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index lists observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:30 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST.

- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly precipitation totals.

+ And also on a later date or dates.

* Amount included in following measurement, time distribution unknown.

Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AM Data based on an observational day ending before noon.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

G In the "Refer to Tables" column in the Station Index the letter "G" indicates Daily Soil Temperatures are published.

M One or more days of record missing; if average value is entered, less than 10 days' record is missing. See Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".)

S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

CALIFORNIA

OCTOBER 1957

Volume LXI No. 10

ASHEVILLE: 1957

WEATHER SUMMARY

The high frequency of storms which passed over the State in October contributed to making this one of the seven wettest and also one of the nine coolest Octobers in the history of climatological records for California. The coolest weather occurred in interior and mountain areas where daily maximum temperatures were quite often unusually low. This was the coldest October of record at Blue Canyon, the sixth coolest at Mt. Shasta since 1908, and the coolest at Red Bluff since 1920. Rather heavy rains during the first two-thirds of the month caused considerable damage to crops; especially grapes, remaining tomatoes, unharvested and drying prunes, and walnuts. This was the wettest October at Red Bluff since 1889 and the wettest along the southern coast in general since 1941. There were reports of thunder, lightning, hail, and occasionally high winds in widespread areas of southern California from the 9th to 11th, 20th to 21st, and 29th to 31st. A waterspout was reported off Point Mugu and others at Oceanside around the 20th, while a baby "twister" struck near Norwalk causing minor damage, also on the 20th. A funnel cloud was observed near March Air Force Base in Riverside County at the end of the month. A description of many of the storms over the State will be found following this summary. The Meteorologist in Charge at Sacramento reported that light to locally moderate rain fell in the northern half of the Sacramento district the first eight days of the month, followed by a warm-type storm between the 8th and 10th, another on the 12th and 13th. A minor crest developed in the upper Sacramento River on the 11th, followed by the first major rise of the season on the 13th. The latter crest reached the Colusa area early on the 15th, resulting in overflow at Tisdale Weir into Sutter Bypass.

Temperatures were generally below average over most of the State except along the immediate coast. The extremes in mean monthly temperature departures ranged from -7.7° at Idria to +4.4° at Salinas Airport. The series of storms that struck the State from the 1st to 23d kept temperatures relatively low, the coldest period being from the 3d to 7th when daily temperature departures dropped to as much as 21° below average at Blue Canyon on the 5th. Lowest minimum temperatures occurred generally during the first week in the northern half of the State and from the 21st to 23d in the southern half. The lowest temperature was 7° at Bridgeport on the 7th. Warmer weather prevailed over most of the State during the last week of October when daily temperatures ranged generally from 5° to more than 10° above average, the highest being 13° above at Los Angeles Airport on the 27th. Highest maximum temperatures were recorded on various days throughout the month although most often from the 1st through the 8th at interior stations and during the last week near the coast. The highest was 104° occurring at Brawley, El Centro 2 SSW, Iron Mountain, and Parker Reservoir on the 1st. Mean monthly temperatures ranged from a high of 75.7° at Cow Creek to a low of 38.1° at Twin Lakes.

Practically every reporting station in the State received above average monthly precipitation. The only exceptions occurred on the lee side of the Coast Mountains and in parts of the upper Mojave Desert. Total falls of from 200 to 400 percent of average were quite common, and two other areas, one just northwest of the San Francisco Bay Area and the other in parts of the Mojave Desert, received totals up to and occasionally in excess of 500 percent of average. At one station in the southern California desert, Ocotillo, where no rain whatsoever fell in all of 1956, 0.48 inch was measured in October. Heaviest falls occurred intermittently from the 9th to 14th over most of the State and from the 28th to 31st in the desert regions. Maximum daily catches of 2.00 inches were common in the northern half of California and from 0.50 to 1.50 inches in the southern half. Many stations in and near Sonoma County received monthly totals in excess of 10.00 inches, the greatest being 18.35 inches at Cazadero, where also occurred the greatest daily catch, 6.75 inches on the 9th. South of the Tehachapis, Cuyamaca measured the greatest monthly fall, 4.80 inches. The least monthly fall was 0.01 inch at Inyokern. This is a rather unusual occurrence since October is normally a relatively dry month when many stations can be expected to receive no precipitation.

Snowfall was reported at all high mountain stations, the greatest fall being 13.5 inches at Raywood Flats in southern California during the period 20th to 22d. In general monthly falls were from 4 to 10 inches. By month's end, however, no snow was on the ground at any reporting station due to the warmer weather which prevailed at the time.

Reports from the California Weekly Weather and Crop Bulletin and also from the California Livestock and Range publication indicated that heavy rains in the north and central counties caused considerable damage to many crops, especially grapes and walnuts, and hampered or temporarily shut down harvesting activities both here and in much of the Sacramento and San Joaquin Valleys. Excessive moisture which caused sprouting and discoloration of beans still unthreshed in the Sacramento and northern San Joaquin Valleys, resulted in considerable loss of yield and quality. The cotton harvest was not greatly affected by weather conditions since rainfall was light in producing areas. In sections of the San Joaquin Valley there was considerable local shattering of cotton seed and discoloration of both seed and cotton. Fortunately, however, about 80 percent of the seed had already been harvested in Kern County. Rains in the Los Angeles area were beneficial to all crops, and in starting annual grass, pastures, and cover crops; and conditioning fields for cultivation and planting of grain. Irrigation was also stopped or schedules reduced in most sections during the rainy periods. The above normal early fall rains stimulated new grass on ranges and pastures statewide, with the result that range feed was in the best condition for October since 1925. The reported condition in all districts was from 8 to 17 points above the October average. Livestock was in good shape, being slightly above the 10-year average over the State.

Joseph R. Glantz
Climatologist
Weather Records Processing Center
San Francisco, California

STORMS, OCTOBER 1957

On the 9th to 11th. A slow moving cold front advancing from northwest to southeast across California caused locally heavy rains and strong winds. Damage other than to crops was widespread though minor. Crop damage ranged from a total loss of some unharvested grapes and prunes in Sonoma and Napa Counties; severe loss to dry beans in Glenn and Sutter Counties and to flax in San Mateo County; down-grading of walnuts and cotton; to increased harvesting costs of all remaining crops due to wet, muddy fields. A coffer dam was washed out at the Trinity River Project; street intersections were flooded in Marin and Santa Clara Counties; some freeway construction was washed out at Palo Alto; and a wax paper factory at Burlingame was flooded, causing heavy damage to paper stock. In southern California the storm caused some flooding and numerous power failures. In San Bernardino a sudden deluge on the 11th overtaxed storm drains and caused some damage to a few homes and one automobile. State Route 39 in San Gabriel Canyon was blocked by a rock- and mudslide. Strong winds blew shingles from a roof in La Habra and branches from trees in Whittier. Severe thunder with hail was observed in the Van Nuys area.

On the 20th to 21st. An upper Low moving southward over eastern California and western Nevada caused widespread thunderstorms. In the Santa Maria area a severe thunderstorm caused heavy rain, 1.13 inches in two hours, flooding many streets. A waterspout was reported off Pt. Mugu. In the Los Angeles area, near cloudbursts flooded San Fernando Valley intersections, 18 inches of hail piled up in drifts at the intersections of Malabar and Indiana Streets in east Los Angeles, and a baby "twister" was reported hitting near Norwalk with minor damage. Two waterspouts were reported off the coast near Oceanside. Lightning struck a television antenna on the roof of a home in Montebello, slashing a 6-foot hole in the roof, and showering plaster on the occupants. Lightning also struck a power plant in San Francisquito Canyon and a transformer in San Bernardino. At San Bernardino a heavy downpour flooded several street intersections, and a huge mudslide occurred near Riverside.

On the 28th to 29th. A low pressure trough extending into southern California from the Gulf of California caused heavy rains in the southeast desert regions and Imperial Valley. Water up to 3 feet deep covered the road at several places on Highway 80, and many schools closed in Imperial Valley.

On the 31st. Locally heavy rains occurred in parts of Los Angeles, San Bernardino, Riverside, Imperial, San Diego and Orange Counties. During a rainstorm at March Air Force Base in Riverside County a funnel cloud was observed west of the field at 12:50 p.m. lasting until 12:57 p.m. Direction of movement was towards northeast.

****

A survey has indicated that the comprehensive narrative weather story carried in each issue of Climatological Data is of value to only a small number of recipients. This story will be discontinued, therefore, with the January 1958 issue. A table of extremes will be carried each month and a text will be carried whenever unusual and outstanding weather events have occurred. General weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.

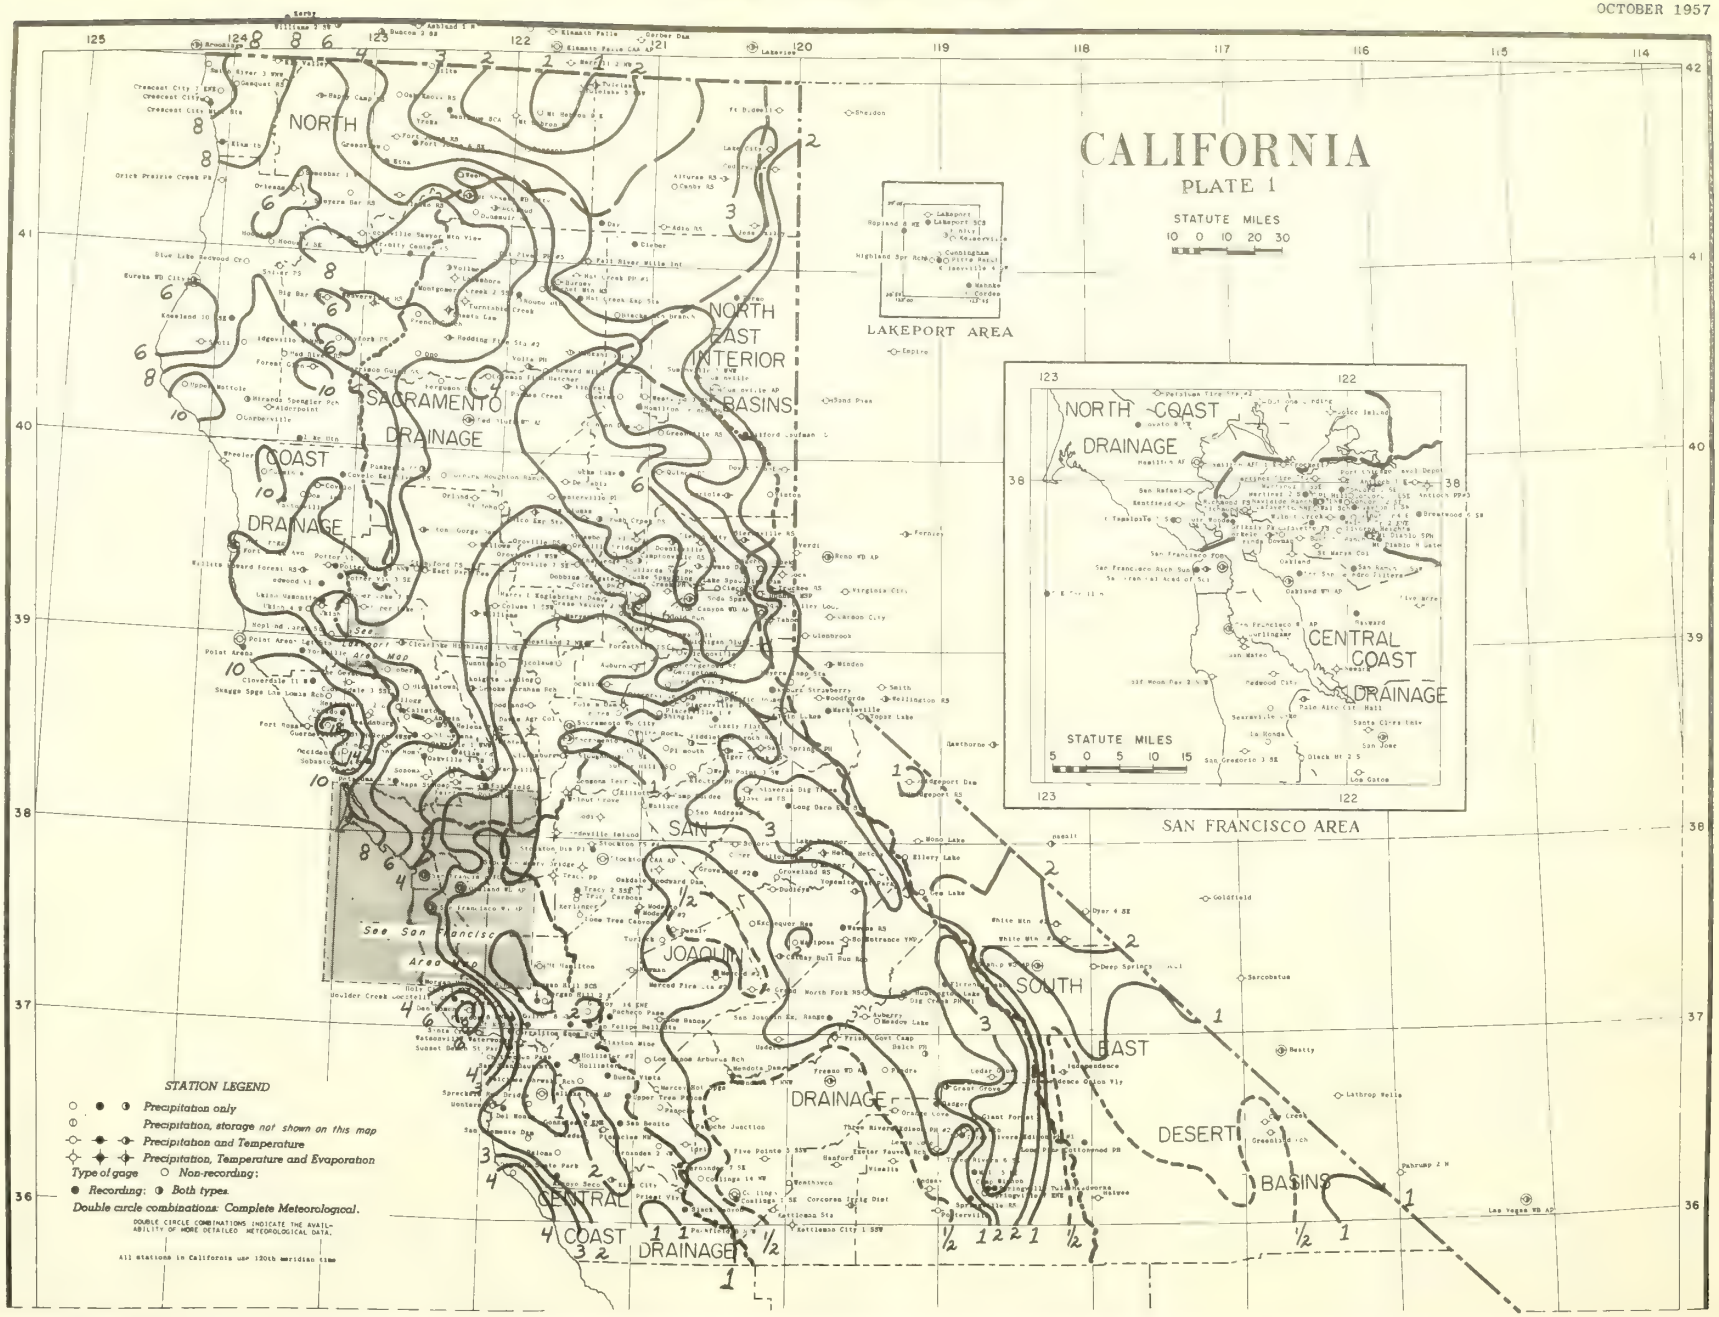
† 8:00 A.M.

++ FASTEST OBSERVED ONE MINUTE WIND SPEED. THIS STATION IS NOT EQUIPPED WITH AUTOMATIC RECORDING WIND INSTRUMENTS.

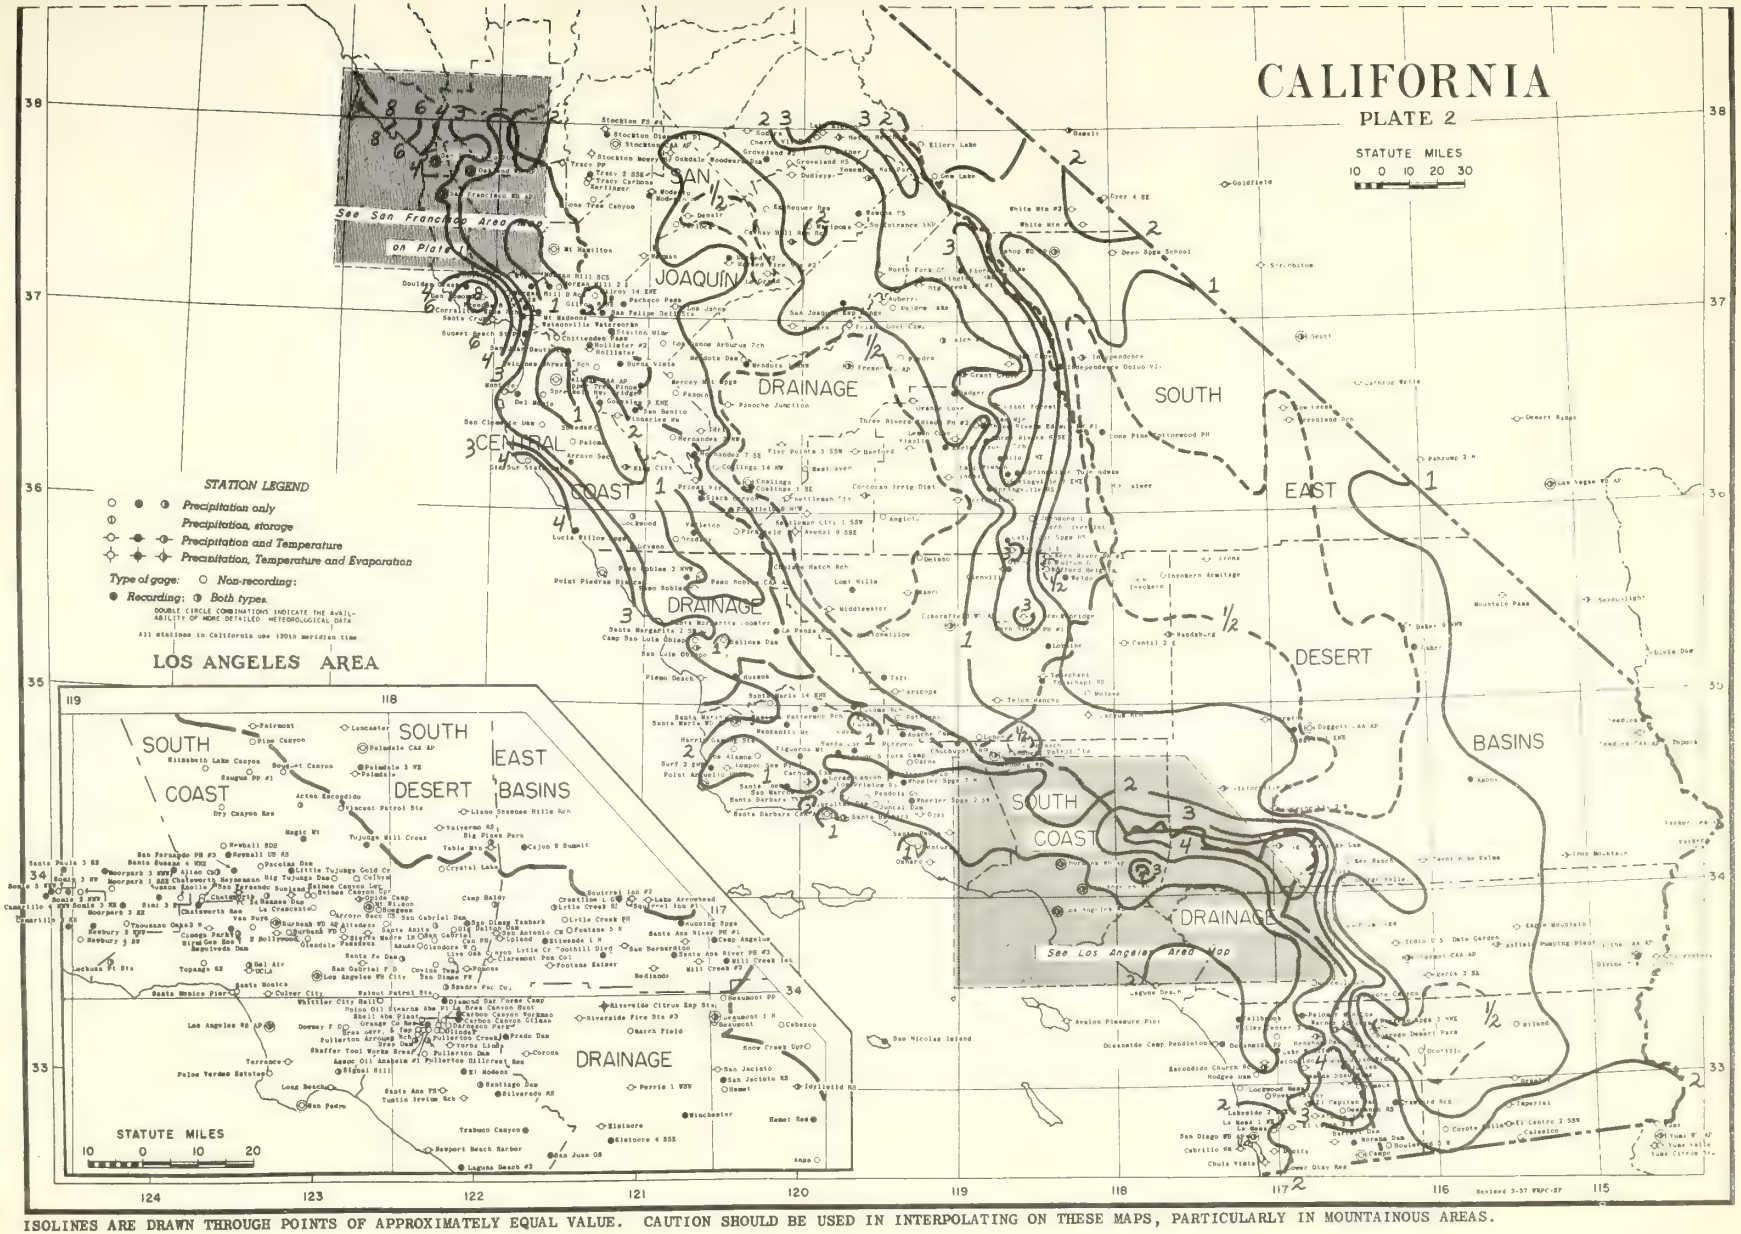
See reference notes following Station Index

TOTAL PRECIPITATION

OCTOBER 1957



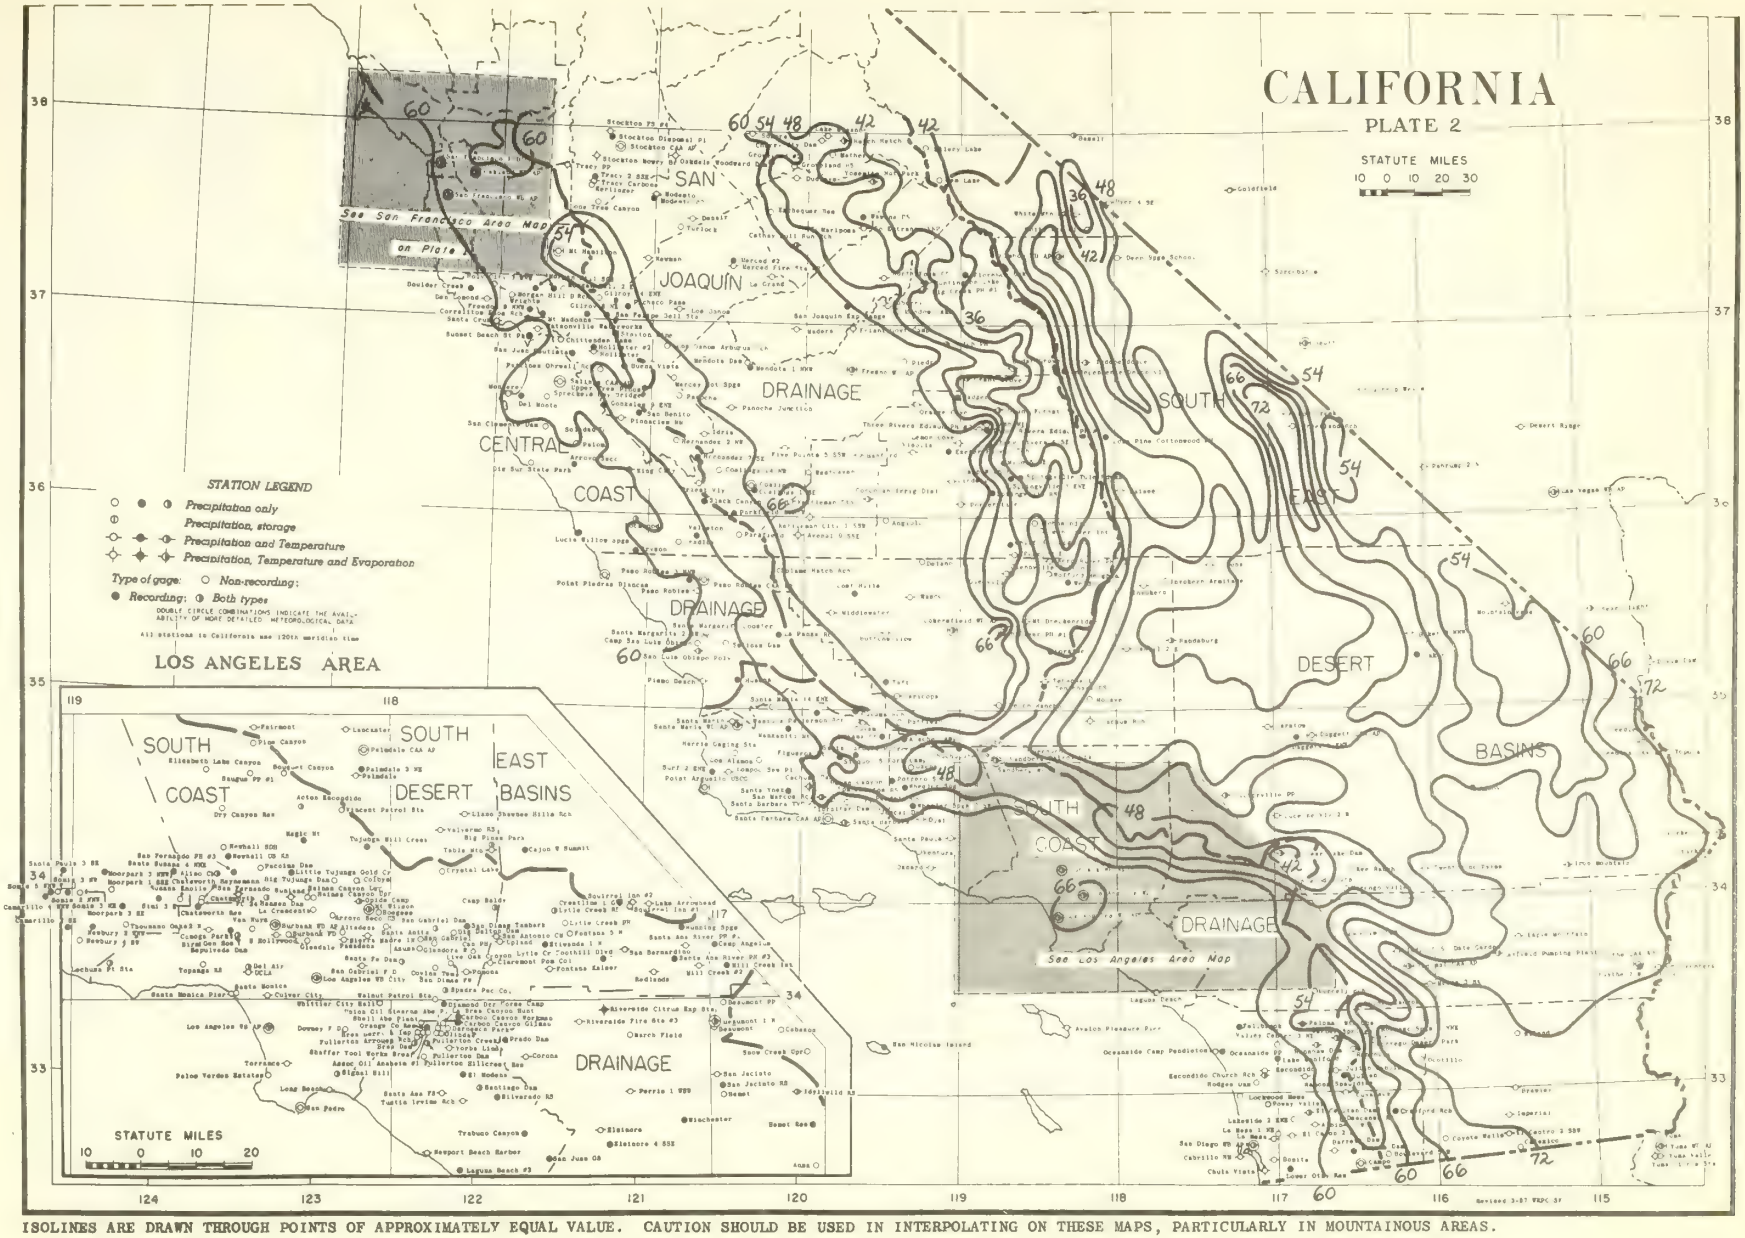
Revised 3-57 WBPC-5T



ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUE. CAUTION SHOULD BE USED IN INTERPOLATING ON THESE MAPS, PARTICULARLY IN MOUNTAINOUS AREAS.

AVERAGE TEMPERATURE

OCTOBER 1957



ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUE. CAUTION SHOULD BE USED IN INTERPOLATING ON THESE MAPS, PARTICULARLY IN MOUNTAINOUS AREAS.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snow pack result in apparent inconsistencies in the record.

Entries of snowfall in Tables 2 and 7, and in the Seasonal Snowfall table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in Tables 3, 5, 6, and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index lists observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:30 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST.

- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly precipitation totals.

+ And also on a later date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AM Data based on an observational day ending before noon.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

G In the "Refer to Tables" column in the Station Index the letter "G" indicates Daily Soil Temperatures are published.

M One or more days of record missing; if average value is entered, less than 10 days' record is missing. See Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".)

S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

CLIMATOLOGICAL DATA

CALIFORNIA

NOVEMBER 1957
Volume LXI No. 11

ASHEVILLE: 1958

WEATHER SUMMARY

The weather over the State was cool; only five other Novembers in the climatological history of California have been cooler. Precipitation was on the light side, only a small number of stations, mostly in the northern and southern quarters, reporting monthly totals above average. The outstanding weather feature of the month, however, was the extremely severe windstorms that struck southern California, especially the Santa Ana winds of the 21st and 22d that blew from Oxnard to San Diego and on the coastal plains and mountains. It was one of the worst storms of this type ever to hit and resulted in widespread damage. In addition, gusty winds helped spread a 28,000-acre brush fire along a 40-mile front west of Crystal Lake in the San Gabriel Mountains. A description of this storm and other storms will be found at the end of this summary.

The passage of rather numerous, but in most instances weak, storms over much of the State during the first two decades of the month held temperatures to near or slightly below average. Temperatures during the remainder of the month were slightly above daily means. Mean monthly temperature departures ranged from -8.3° at Giant Forest to +3.4° at Salinas Airport. Except for rather cool weather, especially in mountain and interior areas, during the periods 2d to 6th and 14th to 17th when daily mean temperatures were as much as 16° below average, daily mean temperature departures did not exceed plus or minus 10°. The lowest minimum was -13° at White Mountain 1 on the 17th. Highest maximums occurred predominantly either on the 1st or 2d or during the last week; the highest was 89° at both Santa Paula and El Centro 2 SSW on the 26th. In only four other Novembers of record has the highest maximum been under 90°. Mean monthly temperatures ranged from a high of 60.8° at both U.C.L.A. and Brawley to a low of 18.7° at White Mountain 2.

Precipitation was deficient in most areas although fairly generous amounts were recorded in the northwestern portion, in the Sierras generally west and northwest of Lake Tahoe, local areas in the northeast, and at scattered stations in the mountains of southern California. The greatest monthly measurement was 12.53 inches at Klamath. A rather intense storm passed over northern and central California on the 13th to 14th resulting in daily catches of from 2 to 4 inches in the northern and from 1/2 to 1 inch in central portions. The greatest daily catch was 5.02 inches at Cummings on the 13th. South of the Tehachapis wettest days were generally the 2d and 3d with daily catches of from 1/2 to 1 inch being quite common. The presence of persistent high pressure over the western plateau during the last decade of the month resulted in a dry northeasterly to easterly flow of air over the State so that as a result practically no precipitation fell. Six stations, all in the Southeast Desert Basin, recorded no precipitation during the month. Snowfall, although rather light, was reported at most stations at higher elevations and generally fell intermittently during only the first three weeks. As a result, the drying conditions during the last week of the month melted all the snow except some above the 9,000-foot level. Several reported monthly totals were: Huntington Lake 19.0 inches, Giant Forest 22.0, Twin Lakes and Grant Grove 33.0; in the southern half of the State, Big Bear Lake 10.0 inches, Table Mountain 12.0, White Mountain #1 15.0, and White Mountain #2 17.5.

Reports from the California Weekly Weather and Crop bulletin and from Department of Agriculture sources indicated that heavy rains in the southeastern portion caused widespread damage to lettuce, cotton, and truck crops in Imperial County and delayed the planting of grain. However, the rest of southern California benefited considerably as rains improved soil conditions. Santa Ana winds toward the end of the month scarred and blew considerable citrus fruit from the trees as well as leaves and some branches from exposed trees in the Los Angeles and San Diego areas. The moderate to sometimes heavy rain in the northern portions during the first half of the month were beneficial to ranges and pastures, but caused considerable delay in soil preparation for grain planting, and other field work. Drying weather near the end of the month was ideal for all farmwork although more rain was needed for grain in many areas. Local frost dropped leaves from some deciduous trees in the Sacramento and upper San Joaquin Valleys. The condition of pastures and ranges was above average in all districts although some coastal and southern California areas were badly in need of rain by month's end. Strong, drying winds of the 21st to 23d did considerable damage to new pasture growth in these areas. Livestock was in very good condition as ample range feed supplies made it possible to delay supplemental feeding longer than usual. The average condition of both ranges and livestock was running well above both la year at this time and the 1947-56 average.

STORMS, NOVEMBER 1957

On the 2d: Strong northerly winds blew down trees a powerlines in Benicia, Napa, and Vallejo. In Vallejo 28-foot neon sign was blown down on the roof of an apartme house.

On the 3d: In southern California strong, gusty wind with locally heavy rain, blew down trees and television a tennas. Many powerlines were snapped by falling branche Sections of the roof on the Air Force radar station on M Laguna were ripped off by wind reported reaching gusts 110 m.p.h. Heavy rain in nearby foothills flooded so intersections in San Bernardino.

On the 5th: Lightning struck a tree in Pasadena brea ing windows in three nearby homes and damaging a park automobile. A woman occupant of one home was treated f shock. Five inches of snow fell on Kratna Ridge in t San Gabriel Mountains. Locally heavy downpours occurred the valleys.

On the 12th: In Santa Barbara strong, gusty winds bro branches from trees. A woman was injured by a falling branc Two boats dragged anchors in the harbor, but no damage w reported.

On the 21st - 22d: Santa Ana winds blowing from t Mojave Desert through mountain passes of southern Californi with gusts reported reaching 90 m.p.h., caused widespre damage to trees, buildings, utility lines, signs, aircraf and automobiles. A 28,000-acre brush fire along a 40-mi front west of Crystal Lake in the San Gabriel Mountains w started when the wind overturned an oil drum used by a ro crew as a warming fire. Blowing dust and sand reduced vis bility to near zero in many areas, and along with other sto debris, presented a major clean-up operation. In some urb areas pedestrians were ordered from streets because of dang from flying glass and other debris. Twelve of 33 passenge aboard a Western Air Lines plane flying over Ontario 10,000 feet were injured (four of them seriously) when t plane was severely jolted by a downdraft in severe turbulenc A round-up of storm damage by communities follows -- LA HABR Several small trees were downed and powerlines were broke RIVERSIDE: A tree-top fire destroyed 80 palm trees. MONTE: Minor wind damage from fallen trees and wires. S JUAN CAPISTRANO: Flower nursery damaged. BANNING: Ro ripped from church. Plate glass window broken in auto sho room. IDYLLWILD: Falling trees damaged 7 automobiles a more than a dozen cabins. HEMET: Four people injured wh a pick-up truck was overturned by wind. Two people we injured in cars struck by falling trees. Six plate gla windows were broken. ALTADENA: Giant eucalyptus lim broken. Full-grown pine trees snapped like matches. Se eral roofs partially or completely destroyed. SAN JACINT A huge tree was uprooted, severely damaging a home. The were many narrow escapes from flying debris. SUNLAND-TUJUNG Two people were injured when a tree fell on a house traile One home was ripped apart by wind. Hundreds of trees we uprooted, one tree 15 inches in diameter snapped in hal Many plate glass windows were smashed. All homes unroof in a 2-block area in Sunland. A warehouse was blown ov in Shadow Hills area. GLENDORA: One person was injur by a falling tree limb. Six homes and five automobiles we damaged by falling trees. Many signs and billboards we blown down. Several buildings were unroofed. OXNARD: Hea damage to young citrus groves. Utility lines, televisi antennas, and window glass suffered most damage. CAMARILL Dozens of television antennas were downed. Trees and fla poles snapped off. Several signs demolished. FONTAN More than 60 trees down. Two house trailers and two furn ture vans were overturned by wind on expressway. Heavy da age to utility wires and poles. Four cars stalled in san storm had paint completely stripped off on windward sid Heavy plate glass window smashed in auto showroom. SAN ANA: Radio station went off the air when transmitter w damaged by wind. POMONA: Hundreds of trees were topple Large limbs, cartons, and other debris littered street Two homes, a garage, and one parked auto damaged by falli trees. One window was broken. COLTON: Many trees a utility lines were down. Two automobiles were damaged

WEATHER SUMMARY (Continued)

falling trees. ONTARIO-UPLAND: Thousands of limbs were torn from trees, and several large trees uprooted or snapped by wind. Two aircraft were overturned by wind at Ontario International Airport. Several automobiles were damaged by falling limbs. Many signs were blown over, houses unroofed, and utility lines damaged. HUNTINGTON BEACH: Seven steel oil derricks were blown down across Coast Highway. SAN PEDRO: Several boats were damaged, and four boats blown ashore on Cabrillo Beach. A 48-foot skin-diving boat was blown ashore on Catalina Island and destroyed by the surf. WHITTIER: Many tree branches were broken, and powerlines downed, but only one small tree uprooted. SAN FERNANDO: A half-built apartment house suffered severe structural damage. The roof of a new house was blown away. Several tied-down planes at San Fernando Airport were damaged. The wing of one plane was sliced off by a hangar door which was torn loose by the wind. Many plate glass windows were shattered. LOS ANGELES: About 350 trees fell in the city, mostly in northern and western areas. Two homes were slightly damaged by falling trees. SAN DIEGO COUNTY: Trees were blown down in El Cajon, Pacific Beach, and San Diego. Shingles were blown from roofs in Ramona and Lakeside. Powerlines were down in many places over the county.

On the 25th: Strong winds breaking through mountain passes raised huge billows of dust, reducing visibility to zero at Ontario, and caused 500 employees at an aircraft overhaul and repair base to be sent home. Two trees were blown down at Chino, a tree was blown down at Sunland, and some powerlines were whipped down in the San Fernando Valley.

On the 29th: Northerly gales aloft brushed the surface in a narrow band along the Berkeley Hills, lasting for about 1-1/2 hours. Three large plate glass windows in a furniture store were shattered, and a window was broken in a printing shop. Branches were blown from trees on the University of California campus, and two large trees were uprooted elsewhere in Berkeley.

On the 29th - 30th: Santa Ana winds breaking through mountain passes caused a new flare-up of the 28,000-acre brush fire in the San Gabriel Mountains. Winds, reaching a reported peak of 80 m.p.h. at Fontana, blew down trees and powerlines. In Buena Park a man was injured when a 60-foot eucalyptus tree fell across a pick-up truck on Highway 39. A house trailer was upset and demolished by wind while being towed on Devils Canyon road north of San Bernardino.

Maurice P. Bergerson
Climatologist
U. S. Weather Bureau
San Francisco, California

A survey has indicated that the comprehensive narrative weather story carried in each issue of Climatological Data is of value to only a small number of recipients. This story will be discontinued, therefore, with the January 1958 issue. A table of extremes will be carried each month and a text will be carried whenever unusual and outstanding weather events have occurred. General weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snow pack result in apparent inconsistencies in the record.

Entries of snowfall in Tables 2 and 7, and in the Seasonal Snowfall table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in Tables 3, 5, 6, and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index lists observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:30 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST.

- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly precipitation totals.

\+ And also on a later date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AM Data based on an observational day ending before noon.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

G In the "Refer to Tables" column in the Station Index the letter "G" indicates Daily Soil Temperatures are published.

M One or more days of record missing; if average value is entered, less than 10 days' record is missing. See Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".)

S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CALIFORNIA

DECEMBER 1957
Volume LXI No. 12

ASHEVILLE: 1958

WEATHER SUMMARY

The weather picture over California during December showed precipitation to be near average, and temperatures, except in and around the San Joaquin and Sacramento Valleys, to be a little above average. The presence of rather persistent tule fog throughout the month in the major valleys, especially in the northern half of the State, was responsible for the below average mean monthly temperatures there whereas nearby mountain stations above the fog were generally warmer than usual. This was one of the cloudiest Decembers of record at both Red Bluff and Sacramento. The unseasonably warm weather between storms in southern California resulted in this being one of the warmer Decembers of record in coastal and interior valleys and the warmest December at San Diego since records began in 1872. A description of many of the storms, and resultant damages, that passed over the State will be found at the end of this summary. According to the Meteorologist in Charge at Sacramento, there were several minor rises on the Sacramento River and its tributaries during the last two weeks of December, and three of these rises on the upper Sacramento River caused overflow near the Tisdale weir into the Sutter bypass. The overflow occurred on the 19th and 20th, 23d and 24th, and again on the 30th and 31st. The overflow depth did not exceed much over 1 foot over the weir on any of the rises. No damage was reported.

Mean monthly temperature departures were generally positive over most of the State, the exceptions being the stations in and adjoining the Sacramento and San Joaquin Valleys, and at coastal and interior valleys north of Monterey toward the Oregon border. Extremes in anomaly ranged from -3.4° at Buttonwillow, Kern County, to +6.6° at Fontana Kaiser, San Bernardino County. There were no outstanding cold spells over the State. Stations with below average daily temperatures were generally those in the tule fog belt. This condition prevailed most often during the first two weeks and occasionally during the last 10 days of the month. In nearly every instance, however, daily departures did not exceed 8° below average. Coastal stations south of the Tehachapis reported mean temperatures to be above daily averages on nearly every day of the month. The departures, however, seldom exceeded 10°. The only excessive departures occurred at Blue Canyon on the 8th and 9th when daily temperatures were 21° and 22°, respectively, above average. Highest maximums and lowest minimums were observed on various days throughout the month, the highest recorded was 90° at Bonita on the 9th and the lowest -12° at Boca on the 23d. Mean monthly temperatures ranged from a high of 61.7° at Los Angeles City to a low of 20.0° at White Mountain 2.

The distribution of precipitation over the State was about average for December. Amounts greater than 10 inches were measured in the northwestern portion, in the Sierra west and north of Lake Tahoe, in the hills behind Santa Barbara, and in the mountains of southern California. Monthly totals seldom exceeded one to one and one-half times the December long-term mean for any reporting station. Major storms dumped precipitation over most of the State during the periods 5th to 6th and 15th to 17th, and in the northern half, especially along the northwest coast, light to occasionally heavy precipitation fell on almost every day from the 15th to the 29th. Greatest daily catches were recorded generally from the 15th to 18th statewise; the greatest recorded was 6.50 inches at Pendola Guard Station, Santa Barbara County, on the 16th followed by the 6.02-inch measurement at Crystal Lake, Los Angeles County, on the 15th. Large monthly totals included: 20.47 inches at Klamath, 21.37 at Elk Valley, and 22.43 at Gasquet Ranger Station, all in northwestern California; while the 13.12 and 14.47-inch measurements at Lake Arrowhead and Crystal Lake, respectively, were high in southern California. Two stations, Niland and Brawley, recorded no precipitation during December. Reported snowfall totals included: Soda Springs 57.0 inches, Squaw Valley Lodge 50.0, Cisco Ranger Station 49.5, and Twin Lakes 49.0.

Reports from the State Climatologist at San Francisco and from the California Livestock and Range publication indicated that the intermittent character of much of December's rainfall was beneficial to most crops and to rangelands. The cold, foggy weather in the San Joaquin and Sacramento Valleys retarded farm operations and growth of small grains and grass, but it also aided in the conservation of moisture in the upper San Joaquin Valley. The good rains in the Los Angeles area during the first week were of tremendous benefit to fields, pastures, and orchards because the intense drying winds and lack of rain during the latter part of November greatly deteriorated cover crops and grass. The generally mild weather, however, in southern California caused some concern among fruit growers due to the early bud development on many fruit trees. Pasture and feed conditions showed more than the usual gain during December and were the best for this time of the year since 1951. The normal to above normal fall and winter precipitation and mild temperatures had enabled new grass to make rapid growth. Range feed was abundant and kept cattle in good flesh. Less than the normal amount of winter shrinkage was expected. The range and pasture feed condition was 29 percent above last December and 12 percent above the 1948-57 average.

Joseph R. Glantz
Climatologist
Weather Records Processing Center
San Francisco, California

STORMS, DECEMBER 1957

On the 4th to 5th: Thunderstorms, heavy rains, and wind occurred in the southern California coastal region. Hail fell in the Downey-Southgate area. A small earthslide occurred at Pacific Palisades, and a slide blocked Brea Canyon Road east of Pomona. Trees were toppled in Los Angeles, Pasadena, Arcadia, Sierra Madre, and Ventura. Wind blew in a plate glass window at an Inglewood automobile agency and a display window at a Ventura Appliance store. Powerlines were blown down in scattered areas, and lightning struck a utility pole in the Walnut area. Slippery streets contributed to many traffic accidents. A freak windstorm in Huntington Park damaged three homes in a one-block area and blew down a billboard which damaged an automobile. In a one-block area of Westchester, a freak wind blew with a roaring sound, twisted off large trees, pushed in a window, swept shingles from a roof, and tore boards from a fence.

On the 15th to 16th: Heavy rains in northern California flooded many stores in Chico, and caused minor flooding in the San Francisco Bay area. A private airplane with seven persons aboard crashed in the Yuba River Canyon during a heavy snowstorm while in flight from Reno to San Francisco. All aboard were killed. In southern California torrential rains flooded many areas of the San Fernando Valley. A subdivision in Canoga Park was inundated causing damage to several homes. A home was damaged by a mudslide in Burbank. Some stores in the San Fernando Valley were flooded causing damage to merchandise. Lowland sections of Glendale, West Los Angeles, Culver City, Inglewood, and San Bernardino were flooded. Three automobiles caught by floodwaters in a dip near Saugus were washed downstream. A section of roadway collapsed at Redondo Beach causing a parked car to plunge 20 feet down a cliff. At Lake Arrowhead 10.22 inches of rain fell during the three days, 15th - 17th. Heavy rains caused mud- and rockslides and closed many mountain roads. Locally strong winds blew down a few trees and branches, and caused scattered power failures over the area.

On the 17th to 18th: An unusually vigorous cold front moving across the northern and central portions of California caused brief but torrential rains and violent gusts of wind in some areas. Minor damage from gusty winds was reported in the Sacramento Valley. At Vallejo winds broke branches from trees, blew down or bent television antennas, and ripped shingles from roofs. A flash flood poured over lawns in one section of the town and flooded some basements. An overflowing storm drain flooded a motel in Millbrae, and mudslides damaged homes and lawns in Belmont. At Seacliff, Santa Cruz County, a freak gust of wind tore the roof from a home, carrying it intact for approximately 400 feet, broke several windows, and knocked down trees and utility lines. In Watsonville a garage was damaged by wind, and trees were blown down.

Maurice P. Bergerson
Climatologist
U. S. Weather Bureau
San Francisco, California

A survey has indicated that the comprehensive narrative weather story carried in each issue of Climatological Data is of value to only a small number of recipients. This story will be discontinued, therefore, with the January 1958 issue. A table of extremes will be carried each month and a text will be carried whenever unusual and outstanding weather events have occurred. General weather conditions in the U.S. for each month are described in the publications MONTHLY WEATHER REVIEW and the MONTHLY CLIMATOLOGICAL DATA, NATIONAL SUMMARY, either of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.

CORRECTED DATA

JANUARY 1956 through JUNE 1957	RIVERSIDE CITRUS EXP STA	TABLE 6: Delete wind movement for entire period indicated.
AUGUST 1956	OSTRANDER LAKE	PRECIPITATION MEASURED IN STORAGE GAGES TABLE, PAGE 232: Precipitation measured on July 18, 1956 should be 63.60.
JANUARY 1957	LAGUNA BEACH	TABLES 2 and 5: Min temperature on 27th should be 38, lowest 34 on 28th and 31st, and days with 32° or below, zero.
MARCH 1957	QUINCY	TABLE 5: Min temperature on 29th should be 40.
APRIL 1957	TOPANGA RS FC 6	TABLE 3: Precipitation on 21st should be .03 and monthly total 2.01.
MAY 1957	EL CAJON 2 E	TABLES 2 and 5: Min temperature on 14th should be 52, mean min 51.3, mean 61.5, departure -1.5, lowest 43 on 2d, days with 32 or below, zero, and total degree days 112.
	HAINES CANYON LOWER FC 364	TABLE 3: Precipitation on 10th and 11th should be an accumulated (*) amount of 1.78 and monthly total 3.18.
	HAINES CANYON UPPER FC 367	TABLE 3: Precipitation on 10th and 11th should be an accumulated (*) amount of 1.95 and monthly total 3.75.
	TOPANGA RS FC 6	TABLE 3: Precipitation on 21st should be .02 and monthly total 1.13.
JUNE 1957	AUBERRY	TABLES 2 and 5: Max and min temperatures on dates indicated should be as follows: Max; 28th, 100; 29th, 92; 30th, 92. Min; 28th, 60; 29th, 60; 30th, 59. Mean max temperature should be 91.9, mean min 56.2, mean 74.2, and departure +2.7.
	CATHAY BULL RUN RCH	TABLES 2 and 5: Min temperature on 30th should be 58, mean min 56.9, and mean 74.2.
JULY 1957	POTTER VALLEY PH	TABLES 2 and 3: Precipitation on 14th should be .14, monthly total .14, departure .10, greatest day .14 on 14th, and days with .10 or more 1.
	RIVERSIDE CITRUS EXP STA	TABLE 6: Evaporation on 1st should be .32 and monthly total 10.02.
AUGUST 1957	DUTTONS LANDING	TABLE 6: Monthly wind total should be 3961.
SEPTEMBER 1957	BIG BAR RS	TABLES 2 and 3: Delete precipitation no record and add the following record: 26th, .45; 27th, .72; 28th, .20; 29th, .17; 30th, .22. Monthly total should be 1.76, greatest day .72 on 27th and days with .10 or more 5, .50 or more 1, and 1.00 or more 0.
	RIVERSIDE CITRUS EXP STA	TABLE 6: Evaporation amount on 1st should be no record and all amounts moved forward one day. Monthly total should be 86.86.
OCTOBER 1957	INDIO U S DATE GARDEN	TABLES 2 and 3: Precipitation on 14th and 31st should be .05 and .48, respectively. Monthly total should be 1.23, departure 1.02, and days with .10 or more 2.
NOVEMBER 1957	OAKDALE WOODWARD DAM	TABLE 6: Evaporation on 30th should be .09 and monthly total 2.23.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snow pack result in apparent inconsistencies in the record.

Entries of snowfall in Tables 2 and 7, and in the Seasonal Snowfall table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in Tables 3, 5, 6, and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index lists observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:30 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST.

- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly precipitation totals.

+ And also on a later date or dates.

* Amount included in following measurement, time distribution unknown.

Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AM Data based on an observational day ending before noon.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

G In the "Refer to Tables" column in the Station Index the letter "G" indicates Daily Soil Temperatures are published.

M One or more days of record missing; if average value is entered, less than 10 days' record is missing. See Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".)

S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

ANNUAL SUMMARY 1957

Volume LXI No. 13

ASHEVILLE: 1958

WEATHER SUMMARY

GENERAL: The weather in 1957 showed that rather persistent precipitation during January abruptly ended the potentially serious drought situation that had plagued the State since the latter part of November 1956. One storm of note that passed over the State on January 27 and 28 resulted in snowfall in the foothills along the coast from San Francisco Bay area southward to below Los Angeles. Up to 5 inches of snow was reported. Unseasonably heavy rains over much of the State in May caused considerable damage to many fruit crops, especially strawberries, and were responsible for an increase in destructive insects and fungus. High frequency of storm passages over California during the last week in September and intermittently throughout October damaged crops considerably, especially grapes, walnuts, and unharvested tomatoes. An extremely severe Santa Ana-type windstorm which struck the southern California coastal plains and mountains on November 21 and 22 was described as one of the worst ever to hit in that section. In addition to numerous reports of heavy local wind damage, gusts reported up to 90 m.p.h., a brush fire on a 40-mile front west of Crystal Lake in the San Gabriel Mountains spread rapidly under the influence of the strong winds and burned over 28,000 acres of valuable watershed.

According to the California Crop and Livestock Reporting Service, the 1957 growing season was generally very satisfactory for field crops with the well-spaced early rains being timely to meet immediate moisture needs of dryland field crops in most sections, and provided ideal conditions for farming operations. Weather conditions were also favorable for the development and harvest of both tree fruit and grapes throughout most of the season, although the hot spell in late June reduced the grape crop, especially in the desert area, and there was a considerable loss of wine grapes, prunes, almonds, and walnuts during the early fall months as a result of unseasonable rains. Frost came at about the usual time, and even though the winter was relatively cold and December 1956 extremely dry, there was only light damage reported to citrus and avocado crops. Disease, insect infestations, fungus, dry rot, etc., were generally kept well under control despite the fact that wet and intermittently warm weather during the late spring and again in the early fall gave impetus to a rather sharp increase in fungus, diseases, and brown rot. The average condition of range feed and pastures was very good throughout the year being generally either near or somewhat above average on each month.

TEMPERATURE: Following an unusually warm December, January turned quite cold especially during the last 10 days when snow fell in the normally snow-free country along the coastal foothills and valleys from San Francisco to Los Angeles. This contributed to making January one of the 7 coldest of record statewide. The weather became especially warm in February; the 95°-maximum recorded at Indio U. S. Date Garden on the 13th marked only the third time since 1921 that any station in the State had recorded a maximum temperature exceeding 94° in February. March and April were about average temperaturewise. The unusually high incidence of storms passing over the State during May was responsible for making it one of the cooler Mays of record, the greatest negative departures occurring south of the Tehachapis. The extremely warm weather, plus a period from the 17th to 26th of low humidities in June in southern California caused considerable sunscald and heat damage to walnuts, avocadoes, strawberries, string beans, and increased the drop of the citrus set. There was a 40 percent loss to string bean crops in San Diego County, a 50 percent loss to grapes in Coachella Valley, and up to $100,000 damage to strawberries in the Oxnard district. This was one of the warmest Junes of record at Bishop, Burbank, Los Angeles, and San Francisco and record-high daily maximums also occurred at numerous stations. July was also a warm month statewide, but north of the Tehachapis cooler weather prevailed in August. In southern California, however, the months of June, July, and August all remained very warm making it one of the warmest such periods of record. In September temperatures were also on the warm side, but to a lesser degree than the three preceding months. Unseasonably heavy rains during the last week in the northern half of the State ended the high fire danger in September, but little or no rain and high maximum daytime temperatures in southern California intensified the fire hazard. The largest reported fires occurred in the Los Padres National Forest and in the San Gabriel Mountains. October and November were cool, both among the ten coolest of record. In December temperatures remained close to average at stations north of the Tehachapis and above average south of the Tehachapis. San Diego reported this to be the warmest December since records began in 1872.

Annual temperature departures were near or slightly above average over most of the State, the exceptions being generally stations on the windward side of the Sierra, the high country in the extreme north-central portion, in much of the Sacramento Valley, and at widely scattered areas. The anomalies ranged from -3.9° at Idria to +3.0° at both Fontana Kaiser and Los Angeles Airport. The year's highest recorded temperature was 123° at Cow Creek on June 25, 26, and 27; the lowest was -27° at Boca on January 9. Mean monthly temperatures ranged from a high of 102.4° at Cow Creek in July to a low of 9.8° at White Mountain 2 in January.

PRECIPITATION: Most of the State received from average to one and one-half times average precipitation for the year, the exceptions being areas on the east side of the mountains in the northeast portion, much of the lower Sacramento Valley, a section in the Sierra in an area bordered by Georgetown Ranger Station to the north and Groveland Ranger Station to south eastward to the Nevada border, scattered sections in the San Joaquin Valley, on the lee side of the coastal mountains southeast of the San Francisco Bay area, in most of the southern California desert, and at various points in the vicinity of Los Angeles and Santa Maria. Deficiencies in precipitation, however, were not too severe, annual totals were usually in the 70 to 90 percent of average range. Extremes in annual precipitation ranged from the 164 percent of average at Table Mountain, Los Angeles County, to 56 percent at Trona, San Bernardino County.

In January precipitation was deficient in the northern two-thirds of the State but very wet south of the Tehachapis where most stations measured monthly totals above average. A series of storm fronts that passed over the State during the last part of February and into the first part of March caused some flooding in northern California. May was an unusually wet month, one of the three wettest in California's climatological history. It was the third wettest May at San Francisco since records began in 1850 and the fourth wettest at Mt. Shasta since 1898. June, July, and August remained relatively dry with most of the precipitation attributed to thunderstorm activity. An intense thunderstorm struck Daggett on July 10 dumping 0.96 inch of rain in less than 25 minutes, and another one struck in the Big Bear Lake-Redlands area, also on the 10th, 0.90 inch of rain falling at Redlands in less than 30 minutes, most of it in 15 minutes. September was unusually wet in the northern third of California. It was the wettest September at Mt. Shasta since 1888 and the third wettest at both Sacramento and San Francisco in over 100 years of record. The remaining two-thirds of the State received little or no rain. October was another month with considerable precipitation, one of the seven wettest of record statewide. Red Bluff measured the greatest October precipitation since 1889 and the southern coastal region in general had its wettest October since 1941. In contrast to the two preceding months, November was rather dry with the outstanding weather feature the high frequency of Santa Ana winds in southern California. Precipitation during December stayed generally within the stations' long-term means, the greatest monthly totals being measured in the northwestern portion.

Extremes in annual precipitation totals ranged from 106.57 inches at Gasquet Ranger Station (120 percent of average) to 1.68 inches at Brawley (65 percent of average). The greatest monthly total was 23.27 inches at Klamath in March and the greatest daily catch was 8.58 inches at Vollmers on September 27.

DESTRUCTIVE STORMS: On January 27 to 30 a cold storm front brought snowfall to unusually low levels in central and southern California. The unprecedented snow caused widespread automobile accidents, 300 in Los Angeles County alone; 3 deaths; and numerous injuries. Snow made many roads impassable and caused the closing of schools in Saugus, Newhall, and Antelope Valley. Torrential rains flooded streets in southwest Los Angeles and snow was heavy enough to break branches from trees in the Woodland Hills area of the San Fernando Valley. One of a series of storms during the period February 20 to 28 caused extensive flood damage in the Los Angeles area and widespread wind damage in the Santa Barbara, Carmel, and San Francisco Bay areas. Street intersections in and around Los Angeles were flooded under 5 to 12 feet of water and there were numerous instances of hillside roads and streets along the Hollywood Freeway being blocked by mudslides, debris, and water. Utilities in various areas along the coast up to San Francisco were interrupted by gusty winds, and pleasure craft in numerous harbors were damaged. A severe rain squall passed over San Francisco April 17 causing damage mainly along a south-

MAX AND MIN IN TABLE 4 REFER TO MEAN MAXIMUM AND MINIMUM TEMPERATURES OF WATER IN PAN.

WEATHER SUMMARY (Continued)

west to northeast path from Hunter's Point across San Francisco Bay to El Sobrante north of El Cerrito. In May, generally during the periods 10th - 11th, 13th - 14th, 17th - 19th, and on intermittent days toward the end of the month, storm fronts caused considerable damage at times throughout the State, and extremely severe thunderstorms accompanied by hail in the vicinity of Dudleys and Auberry caused a prolonged power failure on the 13th. The storm also damaged some of the fruit crops in Madera, Fresno, Kings, and Tulare Counties. Heavy rains damaged much of the strawberry crop in Santa Clara County and washed out bridges near Santa Cruz. Severe thunderstorms during July and August were responsible for the damaging of the center span of the O'Byrnes Valley bridge up the Stanislaus River Canyon on July 6; and for various local damages near Redlands in July and in sections of the southern California mountains and desert in August. Widespread and heavy rains in October were responsible for considerable damage throughout most of the State as a result of local flooding and lightning strikes. An unusually vigorous storm passing over northern and central California on December 17 and 18 caused brief but torrential rains and violent gusts of wind in many areas. Damage was reported in parts of the Sacramento Valley, the Vallejo area, and in Santa Cruz County.

Santa Ana-type winds of note in southern California occurred on the following days: on January 16 in the San Bernardino, Ontario, Fontana, and Chino areas, with gusts reported up to 68 m.p.h.; on March 29 at Edwards Air Force Base, near Lancaster with gusts to 80 m.p.h., and in the southern California coastal basin on March 21 - 22. The usual wind damages, such as power failures, falling telephone lines and trees, the blowing down of television antennas, and numerous other miscellaneous accidents were reported. There were numerous fires in the mountains and foothill areas of southern California during November, the worst being the 28,000-acre brush fire in the San Gabriel Mountains which was fanned by severely strong and gusty winds. On November 21 - 22 an extremely severe Santa Ana windstorm blew from Oxnard south to San Diego and on the coastal plains and mountains. Considerable and widespread damage at most southern California communities were attributed to this storm.

FLOODS: Usual flooding occurred throughout many areas of the State as a result of locally heavy downpours. Rains from a storm of February 20 - 21 primed the relatively dry ground over the Russian River basin for runoff from the rains following. The Russian River crested near 31 feet at Guerneville on the 25th, about 2 feet above flood stage, causing minor flooding in the resort area. On February 25 the Eel River reached a crest of 19.3 feet, inundating several thousand acres of farmland. Damage was mainly debris deposit and bank erosion. Light to locally moderate rain that fell in the northern half of the Sacramento district the first 8 days of October followed by a warm-type storm between the 8th and 10th and another on the 12th and 13th, caused a minor crest to develop in the upper Sacramento River that reached the Colusa area early on the 15th, and resulted in overflow at the Tisdale weir into Sutter bypass. The upper Sacramento overflowed again during the last part of December; however, the overflow depth did not exceed much over one foot over the weir on any of the rises.

Details of each month's weather may be found in the monthly issues of this publication.

Additional information regarding the climate of California may be obtained by writing to the State Climatologist at Weather Bureau Office, 557 Federal Office Building, 50 Fulton St., San Francisco 2, California, or to any Weather Bureau Office near you.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in°F., precipitation and evaporation in inches, and wind movement in miles.

Evaporation is measured in standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 4.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921-1950, adjusted to represent observations taken at the present location. Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Climatological divisions, outlined on the maps in this bulletin became effective with data for January 1941.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.

- \- No record.
- \+ Also later date (dates) or months.
- * Amount included in following measurement.
- V Includes total for previous months. V in annual column means total is for a two-year period.
- # Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
- // Gage is equipped with a windshield.
- B Adjusted to full month.
- C Data for recorder stations denoted by "C" in the Refer to Tables column of the Station Index are processed for special purposes and published in "Hourly Precipitation Data". Length of record for recorder-only stations may be found in the annual issue of "Hourly Precipitation Data".
- E Amount is wholly or partially estimated.
- G In the "Refer to Tables" column of the Station Index the letter "G" indicates that soil temperatures are published.
- M One or more days' record missing; if average value is entered, less than 10 days' record is missing. See monthly Climatological Data for detailed daily record.
- R Amounts from recording gage. These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".
- S Storage precipitation station. Data will be published in the July or August or delayed data December issue of Climatological Data.
- T Trace, an amount too small to measure.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the annual summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

CALIFORNIA

JANUARY 1958

Volume LXII No. 1

ASHEVILLE: 1958

STORM DATA AND UNUSUAL WEATHER PHENOMENA: Santa Ana conditions resulted in strong to whole gale force northerly winds in much of central Los Angeles and western San Bernardino Counties on the 3d - 5th. Winds reached a peak gust of 68 m.p.h. at Fontana Kaiser on the morning of the 5th and at Canoga Park blew down a 130-foot boom of a giant crane which damaged 14 parked automobiles. In Hollywood many tree branches and signs were blown down, and one acacia tree fell across a parked automobile.

A general storm with associated front moving across the State on the 9th and 10th caused widespread thunderstorms with hail and two reported tornadoes in coastal areas of northern and central California. Thunderstorms were reported from Fort Bragg southward to San Francisco. Hail broke windows in homes in Sausalito, and hailstones with diameters of 1/8 to 1/4 inch fell in the Mission district of San Francisco. Minor flooding occurred in Oakland, Marin County, and on the San Francisco Peninsula. A small tornado traveling east-northeast from Bodega Bay at 5:55 a.m. on the 10th to Sebastopol at 6:15 a.m. caused considerable damage over a narrow path estimated 25 - 100 yards in width. Three fishing boats were sunk at Bodega Bay, guest cottages were knocked from foundations, and roofs were torn from buildings. At Elphick Road in the Sebastopol area the path was described as 75 to 100 feet wide. The funnel was not clearly discerned because of darkness but appeared to dip and then rise. Mr. J. L. La Blue of Sebastopol reported a loud roaring noise growing in volume as the funnel approached, heavy thunder and lightning with flashes at about one minute intervals, and hail for a brief interval. Trees were uprooted on Water Trough Road, houses and ranch buildings were damaged on Elphick and Cooper Roads, and a few small outbuildings were almost completely demolished. Chicken ranches were hard hit with many wire cages demolished or deposited on roofs and in trees with resultant heavy loss of poultry. At Kelly Subdivision a house was moved from its foundation. The tornado continued eastward along Todd Road with diminishing violence, dissipating a few miles west of Santa Rosa. Another small tornado occurred at Crescent City at 2:45 a.m. on the 10th with path estimated 60 yards wide and 3/4 mile long. Although darkness limited observation the tornado apparently dipped down to sweep a distance of 2 blocks on Huntington Street in Beresa Tract, then skipped northeastward to dip down on a 2-block path on Amador Street in Filkins Tract. Roofs were torn off, windows smashed, television antennas bent or twisted, wood piles scattered, and trees uprooted or shorn of limbs. Mr. Leslie Williams of Crescent City reported the sound like the rumble of a train coming toward him, awakening him from sleep just before his roof was torn off.

Santa Ana conditions again prevailed over western San Bernardino County on the 22d. Northerly gales blowing through mountain passes reached a peak gust of 56 m.p.h. at Fontana Kaiser. Portions of highways were closed to house trailer traffic, and sand whipped across highways radiator-high in some areas.

Two closely associated storms moving across California in the period 23d - 26th caused heavy rainfall and locally strong winds over much of the State. The heavy rains caused numerous earth slides and local flooding. Nine cars of a freight train were derailed by a slide in Plumas County. Five families were evacuated from flooded homes in Kentfield, and flooding occurred in other areas of Marin County, on the San Francisco Peninsula, and in Santa Cruz. At Sacramento rain fell at an excessive rate of 0.57 inch in 20 minutes. Gale winds damaged trees in the vicinity of Los Banos, and several trees were toppled in Marin County, Oakland, and coastside San Mateo County. A possible small tornado occurred along a path between Irwin and Turlock in Merced and Stanislaus Counties, causing considerable damage to farm buildings, trees, and utility lines on the 25th. In the Irwin area the small tornado occurred about 10 p.m. over a path about 100 yards wide and 2 miles long. The rains and wind contributed to numerous traffic accidents in which eight persons were killed and one injured in northern California. A 12-year old Boy Scout, lost in a blizzard in the Mendocino National Forest was later found dead from exposure. In southern California rains flooded many streets in Santa Barbara, West Los Angeles, Torrance, El Segundo, Manhattan Beach, and the San Gabriel Valley. Water up to 4 feet deep was reported at an intersection in Culver City. Winds damaged utility lines and trees at Redondo Beach and sank two boats after tearing them from the moorings and smashing them against a sea wall. Two persons were injured in storm-contributed traffic accidents, one person aboard a storm tossed boat, and two were swept almost a mile down a rain swollen drainage ditch after their car ran off the road near Etiwanda.

A storm front moving southeastward across the State on the 29th and 30th caused heavy rains and locally strong winds over northern California. Mud slides blocked the Northwestern Pacific Railway 30 miles south of Eureka. Highway US 101 was partially blocked by slides near Leggett, and several small slides were reported in the Santa Cruz Mountains. Some areas of Kentfield were again flooded. The Eel River at Fernbridge reached a stage of 19.2 feet on the 30th, flooding about 5,000 acres. Strong winds blew down trees near Salinas, and powerlines suffered some damage.

The effect of weather on crops can be found in the California Weekly Weather and Crop Bulletin prepared jointly by the California Crop and Livestock Service in Sacramento and the U.S. Weather Bureau State Climatologist, San Francisco

Robert F. Dale
State Climatologist
U. S. Weather Bureau
San Francisco, California

****

MONTHLY EXTREMES

Highest Temperature 87° on the 17th at Los Angeles Weather Bureau Airport.

Lowest Temperature -8° on the 19th at Boca.

Greatest Total Precipitation 22.74 inches at Gasquet Ranger Station.

Least Total Precipitation 0.00 inch at 3 stations.

Greatest One-day Precipitation 4.91 inches on the 29th at Gasquet Ranger Station.

Greatest Total Snowfall 92.0 inches at Soda Springs.

Deepest Snow on Ground 77 inches on the 31st at Soda Springs.

USCOMM-WB-Asheville - 3/3/58 - 2225

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snow pack result in apparent inconsistencies in the record.

Entries of snowfall in Tables 2 and 7, and in the Seasonal Snowfall table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in Tables 3, 5, 6, and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index lists observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:30 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST.

- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly precipitation totals.

+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AM Data based on an observational day ending before noon.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

G In the "Refer to Tables" column in the Station Index the letter "G" indicates Daily Soil Temperatures are published.

M One or more days of record missing; if average value is entered, less than 10 days' record is missing. See Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".)

S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data, obtained as indicated above, price 15 cents.

USCOMM-WB-Asheville - 3/3/58 - 2225

CLIMATOLOGICAL DATA

CALIFORNIA

FEBRUARY 1958
Volume LXII No. 2

ASHEVILLE: 1958

February 1958 was one of the wettest and warmest of record in California, especially in the North Coast Drainage and the northern Sacramento Valley where streamflow was tremendous. The drainage north of Red Bluff received about 300 percent of normal February precipitation, and the inflow to Shasta Reservoir was almost 2,500,000 acre feet exceeding any previous month's inflow by 500,000 acre feet. Record-breaking floods occurred on some streams, and the main stem of the Sacramento broke all records for sustained high flow with a large amount of water spilling into Butte Basin and into all of the bypass systems. The 40.49-inch February precipitation total at Cazadero and 37.78 inches at Vollmers were the greatest totals for any month since records began in November 1939 and December 1937, respectively. At Willows it was the wettest month since records began in 1878. At Sacramento the February total almost reached the record 9.25 inches set in 1940, and it was the second wettest February at Red Bluff since 1878. Minimum temperatures averaged 5.5° above normal at Sacramento, the highest February average minimum since records began in 1878.

On the 10th, one of the few clear nights during the month, a rare display of the aurora borealis was observed over California. At most stations it was visible from about 7:00 p.m. to 11:00 p.m., but at Iron Mountain, in the southeastern desert, and Santa Maria it was visible to 5:00 a.m. the 11th. At Santa Maria the aurora began as a pink glow in the northern section of the sky at 10:20 p.m. reaching a maximum intensity at 3:00 a.m. the 11th with rays noted at times.

STORM DATA AND UNUSUAL WEATHER PHENOMENA: An intense storm stationary off the coast of northern California caused heavy rains, with locally gale force winds, over extreme northern areas on the 2d spreading to southern California on the 3d and 4th. Heavy wet snows in Siskiyou County broke down poles and powerlines near Mt. Shasta. Rain swollen streams and ditches flooded areas of Marin, Napa, Solano, Contra Costa, San Mateo, and Santa Clara Counties. The Feather River reached flood stage near Oroville, flooding Highway 40A in the vicinity of Wagon Wheel. Many earthslides occurred in northern California. The Northwestern Pacific tracks were covered north of Willits, and several freight cars were derailed by a small slide south of Willits. Roads were blocked in Eel River Canyon, and coast side Sonoma and San Mateo Counties. A home was severely damaged by a landslide at El Sobrante, and several homes in a new subdivision in Millbrae were damaged by flowing mud. Strong winds twisted TV antennas at Willits, toppled a number of trees in San Mateo County, and tore an 80-foot barge loose from its moorings on the San Joaquin River east of Antioch. In the San Joaquin Valley, heavy rockslides closed highways near Coalinga, and a farmer lost a tractor in floodwaters. Highways were flooded near Huron. Heavy rains with local cloudbursts occurred throughout southern California coastal areas. There was widespread flooding of streets and intersections, with 73 schools closed on the 4th in the San Fernando Valley, the hardest hit. A few homes were flooded in lowland areas, and in foothill areas many homes were damaged by mud flows. In Stanton three families were evacuated and 18 homes had 6 to 8 inches of water inside. In southeast San Diego, 7 families were evacuated from flooded homes, and at Vista 25 persons were evacuated from a trailer court to a shelter established by the Red Cross. Several homes and a grocery store were flooded at Corona. Earth- and rockslides closed many mountain roads. Several automobiles, stalled in water-filled dips, were washed away by torrents. More than 100 trees were toppled by gusty winds in the Los Angeles area, damaging 15 automobiles and 10 homes. Heavy seas and high winds battered coasts and sea walls from Point Conception to San Diego. Sea water damaged 12 homes between Topanga Canyon and Castle Rock, and 4 families were evacuated from homes at Imperial Beach. A 17-year old girl was washed out to sea by a giant wave and drowned near Point Hueneme. A $200,000 dredging barge was capsized and sunk in Santa Monica Bay. Thunder and lightning accompanied the storm in southern California, striking two homes in Pasadena, one in West Los Angeles, and several power pole transformers. Heavy hail fell in south Pasadena and other areas. Five deaths occurred in traffic accidents attributed to the storm, and a Garden Grove construction worker was suffocated in a sewer ditch earthslide. Heavy rains fell in the southeast interior, and many normally dry washes and arroyos were turned into raging torrents, flooding sections of Highway 6 in the Mojave Desert.

At Gualala, Mendocino County, a waterspout on the 3d moving northward along the ocean beach about 1 mile, crossed a portion of Del Mar Ranch, and dissipated about 1 block from the Gualala Hotel. Three large cypress trees were uprooted on Del Mar Ranch. No buildings were in the path of the water spout which was described by a witness as a cone shaped funnel 150 to 200 feet high, picking up water as it advanced along the beach. The sky was rainy, and the phenomenon was followed by a thunderstorm with hailstones 1/4 to 1/2 inch in diameter.

A series of closely associated storms caused heavy rain over northern California, from Salinas and Stockton northward, for six consecutive days, 7th - 12th. A thunderstor at San Francisco Airport on the 8th resulted in 0.15 inc of rain in 4 minutes. The Eel, Russian, Sacramento, an Feather Rivers began overflowing by the 12th. The Sacra mento River overflowed at Red Bluff, flooding some lowlands West of Chico, lowlands along Pine Creek were flooded. Nea Oroville, the Feather River again flooded Highway 40A. Th Eel River overflowed below Fernbridge, flooding bottom-land in that area. Local flooding of streets and intersection was widespread in Marin County. A highway intersection wa flooded at Schellville, near Sonoma, and the Napa-St. Helen highway was flooded near Yountville. At Fairfield, mino flooding damaged one home and its furnishings. Minor flood ing also occurred at Inverness on Tomales Bay and on th San Francisco Peninsula at Belmont and Redwood City. Numer ous landslides occurred, blocking highways in the Feathe River Canyon, on Highway 101 in Mendocino and Humboldt Coun ties, and at the Marin City-Sausalito underpass in Mari County. The Sir Francis Drake Highway was blocked by slide near Point Reyes, a slide covered El Camino Real a South San Francisco, and several homes were damaged by earth slides in the San Francisco Bay area. Trees with rain loosened roots were toppled by wind.

Heavy rains that fell in northern California on the 17th central portions on the 18th, and shifting to southern Cal ifornia on the 19th as a storm formed off the southern Cal ifornia coast with associated front moving eastward acros the State caused flooding and slides in much of the State The primary damage occurred in the coastal counties from th Trinity River south to Santa Cruz, the Sacramento Valle and in Los Angeles County, but local flooding occurred a far south as Fresno and in the Lancaster-Antelope Valle area. The Eel River crested about 2 feet above flood stag on the 19th flooding several thousand acres of farmland but all cattle and machinery had been moved to safe areas The rains caused a 2000-foot slide on the Northwestern Pa cific Railroad about 80 miles south of Eureka which wit numerous slides across Highway 101, primarily near Piercy intermittently closed both rail and highway travel int Humboldt County. There were several road and bridge wash outs in Trinity County and minor flooding of the upper Trin ity River at Lewiston and Junction City. Hyampom was iso lated when 200 feet of the road to Hayfork was washed out There were many slides in Lake County, and State Highway 2 to Lakeport was closed by high water. Clear Lake rose abou 2 feet above flood stage flooding the basements of about 4 homes. Marin County was the hardest hit in the San Francisc Bay area with many slides, lowland flooding, and power fail ures. There were several slides in the East Bay area, th most serious on Rheem Drive and Moraga Road in Orinda an across Crockett Boulevard and Cumming Skyway. Three house overlooking Lake Merritt in Oakland slid downhill and ha to be razed. There were also slides and local flooding o the San Francisco Peninsula. The San Lorenzo River threaten ed the city of Santa Cruz and there was some evacuation but only minor flooding occurred in the lowlands. Stat Highway 9 was blocked by slides and fallen trees near Brook dale Lodge, and much driftwood was brought down the Sa Lorenzo River and deposited by high tides on the Santa Cru beach. There was some flooding of farmland in low place and in fields adjacent to high running streams in the Sac ramento Valley. Many people were evacuated along the Sac ramento River from Redding to Sacramento, primarily in Glen County as the rising river threatened the levees. Stat Highway 32 between Chico and Willows was closed, and all bu truck traffic was stopped by high water on U. S. 99W sout of Corning. Most roads west of Willows were flooded, an water ran three feet deep over the River Road near Woodlan where it crosses Yolo Bypass. Slides under the Shasta Da light stopped the train about 22 miles south of Dunsmui but there were no derailments or injuries. Local winds be tween Penryn and Loomis blew a tree across powerlines tem porarily cutting power in the Auburn area. Strong wind knocked down powerlines in the Pinecrest area. Some farm land and rural roads were inundated in the lower San Joaqui Valley south to Fresno and Madera Counties, and there wa minor flooding in Patterson, Modesto, and Fresno. Gust winds blew down power poles south of Arvin but there wa only light rain. The heavy rains flooded many lowland sec tions of Los Angeles County with the hardest hit areas th San Fernando Valley, west Los Angeles, and wind- and wave lashed beach communities. The Los Angeles City multimillio dollar water and power plant under construction at El Segund Beach was seriously damaged. Red Cross disaster force moved into stricken low-lying areas of Lawndale, Hawthorne and Manhattan Beach. Although only one stream overflowe in the Los Angeles area -- Dominguez Creek -- the downpou flooded 100 or more intersections in Los Angeles and cause numerous landslides, one at Elysian Park Moving Mountain closing the inbound lanes of the Pasadena Freeway. Ther was 8 feet of water and 10 automobiles were submerged on th Santa Ana Freeway at Atlantic Boulevard. Water at the inter section of Wilshire Boulevard and Mariposa flowed into windo

of parked cars. A bridge washed away in Gardena, and many schools were closed. There was some flood damage to vegetables in the Los Angeles area. Wind driven waves sank 12 boats at moorings in Newport Harbor, the largest a LCVT. Orange County Harbor Department officials reported the storm "as bad as the much talked about blow of 1893". Giant waves damaged 8 houses of Imperial Beach, San Diego County, and a 40-foot fishing vessel, "The Vincent", was sunk with one man drowned.

A well defined funnel cloud was observed over the hills east of Concord from 3:25 to 3:35 p.m. the 19th apparently moving from east to west over a narrow path about 10 - 15 miles long. The weather was rainy. The observer reported no unusual sounds and the funnel well defined and pointing earthward from a dark cloud formation. The Oakland 4:00 p.m. radiosonde showed conditionally unstable air with considerable moisture in lower levels and a dry spot at about 700 millibars.

A violent Pacific storm moving southeastward across the State on the 24th and 25th caused gale winds and heavy precipitation. The peak of the storm, with sustained winds of 40 to 50 m.p.h., occurred on the afternoon of the 24th, and encompassed an area bordered on the north by Humboldt, Trinity, Shasta, and Lassen Counties and on the south by Monterey, San Benito, Merced, and Tuolumne Counties. Within this area gusts to 60 m.p.h. were common, with gusts at Hamilton Field reported to near 80 m.p.h., and at Red Bluff in excess of 78 m.p.h. At Blunts Reef Lightship winds of 75 m.p.h. with 14-foot waves were reported. Gale winds of lesser violence occurred as far south as San Diego County and in the southeastern deserts. Windstorm damage was light in individual cases, but because it was so widespread the aggregate loss to insured property in northern California was estimated to exceed $2,000,000 by the General Adjustment Bureau and was given a catastrophe classification. Most of the damage was confined to roofs, antennas, fences, and glass, but hundreds of trees were toppled, damaging many homes and automobiles in both northern and southern California. Three private planes were demolished, and a fourth heavily damaged at an airport near Livermore. In southeastern desert areas, gales up to 50 m.p.h. produced furious sandstorms which caused extensive damage to automobiles, and upset several house trailers. A 38-foot fishing boat was driven on the rocks at Anacapa Island, but the three crew members got safely ashore. Two boats were torn from their moorings in Santa Monica Bay, but were secured before damage occurred, and a light plane was overturned at Santa Monica Airport. Three deaths were attributed to the storm, one in an automobile accident 10 miles north of Bakersfield, another in an automobile accident near Walnut Creek, and one killed when a tree fell across a car between Crescent City and Klamath. Seven persons were injured by winds in San Francisco. Scattered thunderstorms occurred over the State with heavy hailstorms in the Watsonville and Hayward areas. Lightning struck a church steeple in Eureka. Very large hailstones fell at Bonita, one stone measuring nearly an inch in diameter. Heavy rains accompanied the storm causing northern California rivers and streams to again overflow, and much local flooding of streets and intersections in southern California. A levee of the Sacramento River broke at Hamilton City, letting water flow over thousands of acres of lowland, but the break relieved the pressure on the other levees and allowed the crest of the flood to pass down stream without serious trouble. Many other lowland areas of the Sacramento Valley were flooded with most of the roads connecting U. S. Highways 99E and 99W closed from Red Bluff to Sacramento. Homes were flooded in Corning, 10 farm families were evacuated from lowlands west of Orland, and a number of families were evacuated from areas along Cache Creek in Yolo County. Many families were also evacuated from flooded areas at Dunsmuir, Shasta County, and Upper Lake, Lake County, where water rose 4 - 6 feet deep in the streets as Clear Lake reached its greatest height of record. The Russian River reached its sixth highest flood crest of history at Guerneville, flooding the lowlands over much of its length. Many families were evacuated from homes in the Geyserville-Guerneville section, and 50 families voluntarily evacuated near Ukiah. The Eel River crested 4 feet above flood stage at Fernbridge on the 25th, flooding several thousand acres of farmland and washing away part of a 2-1/2 square mile section of farmland near Fortuna. Much local flooding occurred in the San Francisco Bay area. In Sonora three homes were flooded when landslides blocked storm drains, and Highway 108 was flooded 14 miles west. At Santa Barbara, local flooding closed the Municipal Airport. Landslides were again active in all areas. The Kern River Canyon, east of Bakersfield was blocked. A giant mudslide covered 400 feet of highway south of Crockett. In southern California Topanga and Malibu Canyon roads were blocked by slides, and rockslides threatened three homes at Glendale.

A small tornado occurred about 5 a.m. on the 25th, 1 1/2 miles southwest of O'Neals. The apparent path of the small tornado was 1/2 mile long, 80 - 100 yards wide from southwest to northeast. There was no damage except to trees as the area was remote from buildings and utility lines. The observer (1/4 mile distant) heard a loud roaring noise but darkness prevented observing the funnel. Numerous trees were downed, mostly falling in a north-northeasterly direction, but some limbs were found sheared off and flung 15 to 20 yards to the side of the general path. The weather was cloudy, and the tornado was accompanied by hail and snow, with hailstones 3/16 to 1/4 inch in diameter.

An airline pilot reported a funnel cloud not reaching the ground near Delano at 3:50 p.m. the 28th. On this date there was a strong shear line aloft, in an east-west direction, moving southward over central California. A freak gust of wind also hit the southeast portion of Modesto about 3:50 p.m. the 28th blowing down 9 powerline poles and snapping tree branches. A huge cumulus cloud was overhead. Hail showers of short duration occurred at Sonora, and damaging winds caused an 8-hour power failure at Strawberry Valley. At 3:00 p.m. a half-hour hailstorm occurred at Auberry. There was also considerable thunderstorm activity in the south coastal mountains with powerlines knocked out at Cuyamaca.

The effect of weather on crops can be found in the California Weekly Weather Crop Bulletin prepared jointly by the California Crop and Livestock Reporting Service in Sacramento and the U. S. Weather Bureau State Climatologist, San Francisco.

Robert F. Dale
State Climatologist
U. S. Weather Bureau
San Francisco, California

MONTHLY EXTREMES

Highest Temperature 85° on 24th+ at 3 stations.

Lowest Temperature -9° on the 27th at White Mountain 1.

Greatest Total Precipitation 40.49 inches at Cazadero.

Least Total Precipitation 0.26 inch at Cow Creek.

Greatest One-day Precipitation 6.97 inches on the 24th at Cazadero.

Greatest Total Snowfall 104.0 inches at Soda Springs.

Deepest Snow on Ground 108 inches on the 5th at Soda Springs.

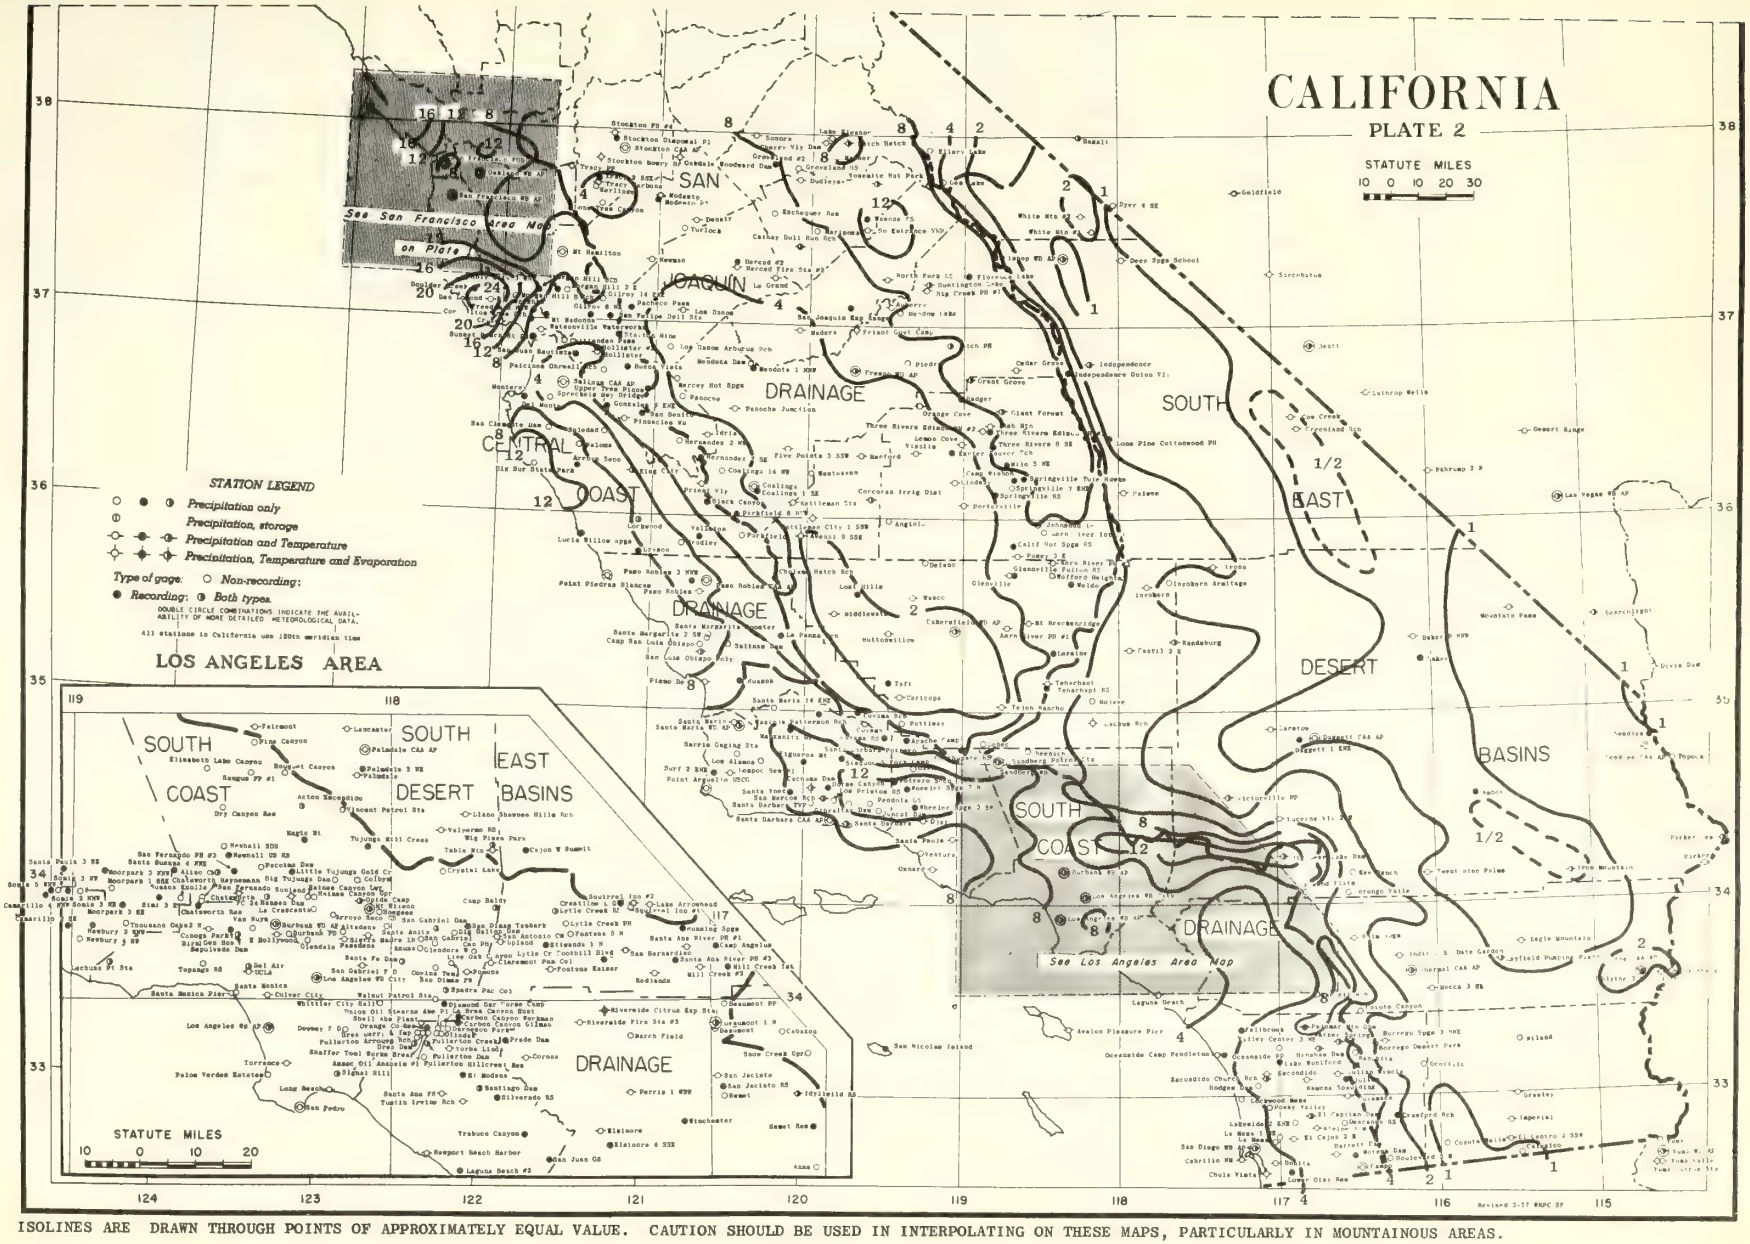
STATION LEGEND
Precipitation only
Precipitation, storage not shown on this map
Precipitation and Temperature
Precipitation, Temperature and Evaporation
Type of gage ○ Non-recording:
● Recording: ◑ Both types
Double circle combinations Complete Meteorological.
DOUBLE CIRCLE COMBINATIONS INDICATE THE AVAILABILITY OF MORE DETAILED METEOROLOGICAL DATA.
All stations in California use 120th meridian time



ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUE. CAUTION SHOULD BE USED IN INTERPOLATING ON THESE MAPS, PARTICULARLY IN MOUNTAINOUS AREAS.

AVERAGE TEMPERATURE

FEBRUARY 1958

ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUE. CAUTION SHOULD BE USED IN INTERPOLATING ON THESE MAPS, PARTICULARLY IN MOUNTAINOUS AREAS.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950. Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Blue Canyon WB AP at 5:30 a.m.

In the Station Index the letters C, G, H, J and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, are published in the July or August issues, or as delayed data in the December issue of this publication.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

AM Data based on observational day ending before noon.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication 'Substation History' for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

MARCH 1958
Volume LXII No. 3

ASHEVILLE: 1958

The unusually wet weather of January and February continued through March, but a marked change in the weather pattern during mid-March forced much colder storms over California. Temperatures for the month averaged much below normal over the entire State for one of the coldest Marches of record, and it was also one of the wettest Marches of record. In the entire 109 years of record at Sacramento and San Francisco the two-month period February-March was the wettest and the second wettest, respectively. The combined heavy precipitation and below normal temperatures brought heavy snowfall in the mountains and the snow line to low levels. Besides the heavy rains and flooding the cold-type unstable storms brought a rash of thunderstorms and unprecedented tornado activity.

STORM DATA AND UNUSUAL WEATHER PHENOMENA: Widespread thunderstorm activity associated with a cold-type storm front moving southeastward across the State on the 5th and 6th caused locally heavy rains and hail in the upper San Joaquin Valley and southern California. A few streets were flooded in Bakersfield. Hail fell in the Antelope Valley, down-town Los Angeles, and San Diego County. Lightning struck power transformers at La Habra, and set a house on fire in Bell Gardens, Los Angeles. Heavy snow fell in the mountains down to 2,000 feet, and strong winds damaged school property in San Dieguito near Encinitas.

A storm moving southward along the northern California coast on the 10th and becoming large and complex over the southern plateau and southeastern California on the 11th and 12th caused lightning and snowfall in southern California on the 10th and 11th and widespread thunderstorm activity over the entire State on the 12th. Lightning knocked down several power lines in the Los Angeles area, and snow temporarily closed roads in the Tehachapi Mountains. Damage from a severe local wind occurred in the Dominguez area of Long Beach on the 12th, and lightning damaged several homes and trees in Monrovia. There were many hail occurrences, hail accumulating to depths of two inches on the ground in the California Avenue area of Palo Alto.

A small tornado moved from southwest to northeast across the Madera golf course from 11:00 to 11:02 a.m. on the 12th hitting the west side of the pro shop. A white funnel extending about 1,000 feet below a large black cloud moved across the fairway preceded by first a downpour of hail and then rain. A loud roaring noise was reported. Heavy shake roofing was ripped from the roof of the pro shop porch, and heavy supporting posts were pulled from concrete footings and moved outward 6 to 10 inches. Trees adjacent to the course were twisted severely, and a heavy bench was carried into the air and demolished.

A storm moving northeastward into central California on the 15th and Nevada on the 16th caused heavy rain which overtaxed many drainage systems and resulted in much local flooding, primarily in the Fresno area and southern Los Angeles County where some evacuation was necessary. There were many rock and mud slides. A boy was killed by a car plunge into a washed-out bridge approach 21 miles west of Mendota, and two people were injured by a rock slide into a house at Beverly Hills. There were numerous weather contributed traffic accidents.

Two funnel clouds were reported at March Air Force Base near Riverside. The first was observed moving from the south from 12:21 to 12:29 p.m. on the 16th. The second was observed moving from the south-southeast from 4:09 to 4:24 p.m. on the 17th.

A storm off the Pacific Northwest coast with an intense storm front moving across the State on the 20th and 21st caused heavy precipitation, thunderstorms, wind, and hail over the entire State continuing through the 24th. Gale force winds in northern and central California damaged property from Eureka to Fresno. A $15,000 fishing boat was torn from its moorings and sunk at Trinidad, a 26-foot boat was heavily damaged at Bodega Bay, and a 110-foot schooner was torn from its moorings in Richardson Bay, narrowly escaping foundering before its rescue by the Coast Guard. Structural damage was reported in Eureka, San Francisco, Oakland, San Jose, Yuba City, and Fresno. A 10,000 square foot section of grandstand roof at the Santa Clara County Fairgrounds was blown away, and trees and utility poles were blown down in many areas. Lightning destroyed a steeple tower of a church in Petrolia, Humboldt County, and elsewhere struck many power lines and transformers. There was local flooding of streets in the San Francisco Bay area, in the Sacramento and San Joaquin Valleys, and southern California. In the San Joaquin Valley the overflowing of Bear and Black Rascal Creeks flooded 5,000 acres of farmland in the McSwain area, and about 2,000 acres flooded in the La Vina district southwest of Madera from the overflowing of Cottonwood Creek. A minor rise in the Eel River cut away 75 feet of pasture near Fernbridge collapsing an 80-cow dairy barn into the river. Earth slides continued active in many areas, with several additional homes damaged in the Bay area and southern California. A woman was injured in El Cerrito when a retaining wall collapsed and crushed a house trailer, and at Albany a woman narrowly escaped death when a mudslide crashed into a bedroom. At South San Francisco a seven-year old girl drowned in a rain-swollen creek, and a man drowned when his car was washed off the road into Chickahominy Slough between Woodland and Winters.

A Pacific storm off the central California coast on the 27th moved eastward to Nevada on the 28th causing heavy rain along the central and southern California coast and locally strong winds in portions of Los Angeles County and the Mojave Desert. Several more earth slides were reported in the San Francisco Bay area, Sierra Nevada, and Los Angeles area. A slide north of Santa Monica on the 27th completely covered the four-lane Pacific Coast Highway for a distance of 150 feet and pushed an automobile into the ocean, the two passengers escaping with minor injuries. Many streets were flooded in the San Fernando Valley where some schools were forced to close. Winds in the Los Angeles area downed high tension wires, caused some light structural damage, damaged and forced abandonment of the Long Beach Airport control tower, and blew a 35-foot fishing boat on the rocks off Portugese Bend with the crew of five rescued.

A well defined funnel cloud, approximately five miles east-northeast of Chowchilla, was observed by a Weather Bureau meteorologist from a moving train at 2:48 p.m. the 27th. The funnel was sufficiently close (about 300 yards) to observe rotating clouds. The funnel was southwest of a heavy shower area with heavy black clouds to the north and east. The visible portion of the funnel extended down from a cloud ceiling of about 2,500 feet to within about 300 feet of the ground.

Waterspouts were observed in the San Diego area on the 27th and 28th. The first on the 27th was observed about 3 miles southwest of North Island from 3:45 to 3:57 p.m. moving toward the east-northeast. The width of the path was estimated at 25 yards, the weather was showery, and there was no damage. The second waterspout was observed offshore from Ream Field at 4:40 p.m. on the 28th.

A small tornado occurred at McKinleyville, Humboldt County, from 1:40 to 1:42 p.m. on the 29th. It came ashore as a waterspout advancing on a zig-zag path from southwest to northeast, tearing roofs from six houses, knocking down trees, slanting telephone poles, breaking power lines, and scattering debris over the countryside with estimated property damage about $2,000. Heavy rain fell, and a witness described the funnel about five feet in diameter, 150 feet long, and extending from a heavy black cloud. The path of damage was about 200 yards wide and one mile long. A series of intense storms began on the 29th and continued into April causing high winds, heavy rains and snow, and thunderstorms over the entire State. Storm fronts moved southeastward across the State on the 29th - 30th and the 31st - April 1. Wind gusts to 69 m.p.h. were reported at Montague Airport on the 29th. A severe local wind reported as a tornado occurred four miles northeast of Santa Rosa about 12:05 a.m. on the 30th causing about $2,000 damages to property over a path 1/2 mile long and 100 yards wide, movement from southwest to northeast. Another earthslide at Pacific Palisades (north of Santa Monica) on the 31st killed a State Highway Engineer and buried trucks and earth moving equipment valued at $100,000. New slides in the San Francisco Bay area on the 30th wrecked several more homes. One of the most severe local storms of the series occurred late on the 31st and early on April 1st and will be carried in the April storm summary.

The effect of weather on crops can be found in the California Weekly Weather and Crop Bulletin prepared jointly by the California Crop and Livestock Reporting Service in Sacramento and the U. S. Weather Bureau State Climatologist, San Francisco.
